CONTENTS

OF THE

REGISTRAR-GENERAL'S ANNUAL REPORT FOR 1892.

REPORT:— PAGE

POPULATION. Natural and estimated increase v

MARRIAGES. Marriage-rate; Relation between Marriage Rate and commercial activity; Forms of Marriage; Increase of Jewish Marriages; Previous Civil Condition of Persons married; Ages at Marriage; Signature in Marriage Register; Buildings registered for the Solemnisation of Marriages; Certified Places of Worship . v–viii

BIRTHS. Numbers and Rates; Slight rise in Birth rate; Sex; Illegitimate Births . . . . . viii–ix

DEATHS. General death-rate; County death-rates; Sex; Ages; Infantile Mortality; Urban and Rural Mortality; Registered Causes of Death; Zymotic or Specific Febrile Diseases; Re-appearance of Small-pox; Rise in mortality from Diphtheria; Epidemic Influenza; Diarrhœal Complaints; Hydrophobia; Puerperal Fever; Parasitic, Dietetic, Constitutional, Developmental, and Local Diseases; Deaths from Violence; Ill-defined and Un-specified Causes; Certification of Causes of Death . . . . . ix–xviii

OFFENCES AGAINST THE REGISTRATION ACT xviii

PROGRESS of REGISTRATION. Aggregate Number of NAMES on the REGISTERS; NUMBER of SEARCHES in the Registers and of CERTIFICATES granted at the CENTRAL OFFICE; FEES received . . xviii–xix

ARMY AND NAVY. STRENGTH and MORTALITY of the ARMY at HOME and ABROAD; STRENGTH and MORTALITY of the NAVY . . xix

BIRTHS and DEATHS of BRITISH SUBJECTS at SEA. MARINE REGISTER BOOK; MORTALITY of MERCANTILE MARINE; MORTALITY among PASSENGERS xix

INTERNATIONAL VITAL STATISTICS xx

METEOROLOGY; Remarks by James Glaisher, Esq., F.R.S. . . . xxi–xxiii

PRELIMINARY TABLES . . . . . xxv–lxxviii

ABSTRACTS:—

BIRTHS (distinguishing Legitimate and Illegitimate), DEATHS, and MARRIAGES Registered in England, and in its Registration Divisions, Counties, and Districts; and BIRTHS and DEATHS in sub-districts . 1–63

MARRIAGES, Analysis of, in Registration Divisions and Counties; distinguishing the mode of Solemnisation, the number in each quarter of the year, the Previous Civil Condition of Persons married, those not of Full Age, and the Signatures in the Marriage Register 64–67

AGES of Persons married, distinguishing those of Bachelors, Spinsters, Widowers, Widows 68–70

DEATHS of Males and Females in Public Institutions. . . . 71–94

DEATHS of Males and Females at different Age-periods, in REGISTRATION DIVISIONS and COUNTIES 95–105

in 1889, which was the lowest on record, as is shown in the following table:

TABLE A.—MARRIAGE-RATE, BRITISH EXPORTS and IMPORTS, PRICE of WHEAT, and amount cleared at the London Bankers' Clearing House, 1860–92.*

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, whilst the latter relate to the whole of the United Kingdom. The figures relating to exports and imports and to the price of wheat are derived from the Board of Trade Statistical Abstracts; and those showing the amount cleared at the London Bankers' Clearing House (calculated upon the population of England and Wales) are derived from the same source.

Forms of Marriage.—Of the 227,135 marriages contracted in 1892, 158,632, or 698 per 1000, were celebrated according to the rites of the Established Church, and 68,503, or 302 per 1000, otherwise. In 1891 the proportions had been 699 and 301, or practically the same as in 1892 (Table 5). The proportion of marriages amongst Roman Catholics fell from 42 to 40 in the 1,000, while that amongst other non-conforming bodies remained stationary at 118. The Jewish marriages, of which the proportion had been gradually rising for a long series of years, and had reached 4·6 per 1000 in 1891, were again 4·6 per 1,000 in 1892. This supports the opinion expressed in the last Annual Report that the proportion of Jews in the population of this country has more than doubled in the last 20 years.

First marriages; Re-marriages.—Of 1000 men married during the year 1892, 884 were bachelors, and 116 were widowers; while of 1000 women who married, 918 were spinsters and 82 were widows. This is the first notable break in the decline of re-marriages as compared with first marriages which has been going on since 1876. The number of persons married in 1892 who were described in the register as having been previously divorced, and who, in the above proportions, are included among the bachelors and spinsters, was 190, including 108 men and 82 women. This total exceeded that recorded in any of the seven preceding years, in which the numbers had been respectively 170, 163, 173, 178, 150, 181, and 184. Of the 108 divorced men, 93 married spinsters, 9 married widows, and 6 married divorced women. Of the 82 divorced women, 52 married bachelors, 24 married widowers, and 6 married divorced men.

Ages at Marriage.—In regard to 6239, or 2·7 per cent., of the marriages, the age of one or other of the contracting parties was omitted from the register. Of the remaining 220,896 couples, whose ages were stated, the mean ages were 28·46 for the men and 26·19 for the women. The mean age of the bachelors was 26·48, of the widowers 44·51, of the spinsters 24·98, and of the widows 40·54. In each of these groups, the mean age was the highest on record. This shows, as the returns of recent previous years have also shown, that there is an increasing tendency to defer marriage until a somewhat later period of life. Evidence to the like effect is afforded by the decline in the proportion of under-age marriages. In the earlier years of civil registration the proportions of those who married under 21 years of age were less than 50 in the thousand for men, and less than 150 in the thousand for women; but the proportions went on increasing steadily until in 1874 they stood at 84 in the thousand for men, and 227 in the thousand for women; these being the maximum record for each sex respectively (Table 7). The under-age marriages then began steadily to decline, and they have continued to do so almost uninterruptedly till 1892, when the figures stood at 59 for men and at 187 for women, or almost the same as in 1858.

The counties in which the proportions of under-age marriages among men in 1892 were highest were Bedfordshire, Staffordshire, Leicestershire, and Nottinghamshire; and that this is not the casual occurrence of a single year is shown by the fact that these four counties were among the five with the highest average proportions both in 1891 and in the whole decennium 1881–90. The counties with the highest proportions of under-age marriages among women were Durham, Nottinghamshire, Derbyshire, Staffordshire, Monmouthshire, Yorkshire, Buckinghamshire, and Leicestershire. With the one exception of Buckinghamshire these counties had also stood highest in the list in 1891 as well as in the previous decennium.

Almost similar agreement exists between the figures for 1892 and those for recent previous years, in the counties with the lowest proportions; there being very low proportions in both periods for men in Herefordshire, Shropshire, and North Wales; and for women in Devonshire, Here-

fordshire, Shropshire, Westmorland, and North Wales. It is plain, therefore, that the comparative frequency of early marriages in different counties is not merely a temporary phenomenon, but is one depending on persistent causes.

Signature in Marriage Register.—The men who signed the marriage register with marks instead of writing their names were in the proportion of 56 in 1000, while the similarly illiterate women were 66 in 1000. In 19 out of 1000 marriages both bridegroom and bride used that form of signature. With the progress of elementary education there has been a continuous diminution in the proportions of both men and women signing with marks; and in 1892 the proportions, as compared with those in 1891, showed a reduction of 13 per cent. for men and of 10 per cent. for women.

Buildings registered for the Solemnisation of Marriages.—At the end of the year 1892 there were 15,092 churches or chapels belonging to the Established Church in which marriages could be solemnised, showing an increase of 48 upon the number at the end of the previous year. There were also 10,998 buildings registered for marriage by rites other than those of the Established Church, showing an increase of 217, or 2·0 per cent., upon the number on the register at the end of 1891. (Table 9.)

Certified Places of Worship.—During the year 1892, 559 new buildings were certified for religious worship under the provisions of the Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81, while 115 buildings already certified were removed from the register by cancellation; the number of buildings so certified on the register at the end of the year was 27,767. It is probable, however, that some of these are no longer used, although they have not yet been removed from the register by cancellation.

Births.

The births registered in the year numbered 897,957, and were in the proportion of 30·5 to each 1000 persons living, this rate being lower than in any previous year on record, with the one exception of 1890, when the rate did not exceed 30·2. Compared with the mean rate of births in the decennium 1882–91, which had been 32·2, the rate in 1892 showed a deficiency of 1·7 per 1000.

The recent rise in the marriage-rate has, in spite of the anticipated* effect of the influenza epidemic, kept the birth-rate a little above the low point reached in 1890; and it may be predicted that, when the corrected figures for 1893 are available, a further recovery of the birth-rate will be found to have taken place.

The registration counties with highest birth-rates were again as usual the mining and industrial counties; one reason for this being that the proportion of young married persons of reproductive ages is higher in such counties than in the country at large; thus, the highest rates were 32·2 in Lancashire, 32·4 in Nottinghamshire, 33·0 in Derbyshire, 33·2 in Northumberland, 34·4 in South Wales, 35·3 in Staffordshire, 35·7 in Monmouthshire, and 36·6 in Durham. On the other hand the lowest rates, in no case exceeding 26·0, were in Surrey, Sussex, Dorsetshire, Devonshire, Herefordshire, Rutlandshire, and Westmorland. (Table 10.)

Sex.—The male births numbered 456,622, and the female births 441,335, the former being to the latter in the proportion of 1035 to 1000, the average proportion in the previous decennium having been 1037 to 1000.

The proportions of male to 1000 female births were highest in the following counties:—Rutlandshire 1161, Cambridgeshire 1095, Huntingdonshire 1090, Sussex 1075, Cheshire 1067, and Bedfordshire 1066. They were

* *See* Registrar General's 54th Annual Report, p. ix.

lowest, in Westmorland 921, in Herefordshire 957, in Oxfordshire 1001, in Wiltshire 1009, in Warwickshire and in the East Riding of Yorkshire 1011, and in Kent and in Leicestershire 1012.

Illegitimate Births.—The infants registered as born out of wedlock numbered 37,581: they were in the proportion of 42 to 1000 births, and of 1·3 to 1000 persons living, these proportions being the same as in 1891, and therefore the lowest as yet recorded (Table 2). The registration counties which showed the highest proportions per 1000 of illegitimate to total births were Cumberland 72, Shropshire 70, Norfolk 66, North Wales 64, Herefordshire 62, Westmorland 61, and Lincolnshire and Nottinghamshire 56. The counties in which the lowest proportions obtained were Essex and Monmouthshire 29, Middlesex 30, South Wales 33, Warwickshire 34, and Northamptonshire and Somersetshire 35.

Deaths.

During the year 1892 the deaths registered in England and Wales numbered 559,684, and were in the proportion of 19·0 to 1000 persons living. This rate was lower by 1·2 per 1000 than the exceptionally high rate of 1891, and was also 0·3 per 1000 lower than the average rate in the entire decennium 1882–91.

The lowest county rates, in no case exceeding 17·0 per 1000 were, in Rutlandshire 12·8, in Surrey, in Middlesex, and in Westmorland 16·0, in Lincolnshire 16·5, in Kent and in Northamptonshire 16·8, in Cumberland and in Sussex 17·0; whilst the highest were, in South Wales 19·9, in Staffordshire 20·2, in London 20·3, and in Lancashire 21·3. (Table 10.)

Sex.—The 559,684 deaths included 286,062 of males and 273,622 of females. The death-rate of males was 20·0, and that of females 18·0, per 1000 living of the corresponding sex. (Table 10.)

Out of equal numbers living there were 1111 deaths of males to 1000 deaths of females, the difference being less than in any year since 1866; the average proportion in the decennium 1882–91 had been 1123 to 1000.

Ages.—With a few exceptions the death-rates at the several ages had reached their lowest levels in 1888, and had remained nearly constant in 1889. (Tables 11 and 12.) In 1890 there had been an increase at every age-group, attributable mainly to influenza. In 1891 this increase had been practically maintained at ages under 35; while at ages over 35 there had been a further increase. In 1892 the changes were somewhat remarkable. At all age-groups under 35 the rates fell again to about the same levels as in 1889; in the groups between 35 and 65 for males, and between 35 and 55 for females, the rates fell to figures intermediate between those of 1889 and 1890; whilst in the groups above 65 for males, and above 55 for females, the rates fell to about the same levels as in 1890 (a trifling exception in the case of females being the age-group 75–85, in which the fall was not quite so great).

Infantile Mortality.—The infantile death-rate or proportion of deaths of infants under one year to registered births was 148 in a thousand, a proportion which had been slightly exceeded in 1886, in 1890, and in 1891, but otherwise was higher than in any year of the preceding decennium. (Table 18.)

Urban and Rural Mortality.—The decrease of mortality in 1892, as compared with 1891, was more conspicuous in the urban than in the rural population, the death-rate among the former being only 108 to 100 among the latter. The lowest previous proportion had been 113 to 100 in 1885 and again in 1886, whilst the proportion in 1890 had been as high as 120 to 100.

The urban rate had been suddenly raised by the influenza epidemic from 19·3 in 1889 to 20·9 in 1890, and had been 21·1, or practically the same, in 1891. The rural rate, on the contrary, had been raised by two nearly equal steps from 16·4 in 1889 to its maximum, 18·5, in 1891. In 1892 the urban rate fell to 19·5, barely exceeding the rate in 1889, while the rural rate fell only to 18·1, which is nearer to the rate in 1891 than to that in 1890. The influenza epidemic would appear to have commenced in the towns, where it practically exhausted itself in 1890 and 1891, and to have spread more slowly in the country districts, where it took longer to die out. This impression is strengthened by examination of the rates in the separate quarters: thus there was a sudden and remarkable rise of mortality in the first quarter of 1890, which affected the urban districts more than the rural, the rate in the former being 3·8 per 1000 higher than the rate in the first quarter of the previous year, whereas the excess in the latter was only 3·2 per 1000. A second rise in mortality began in the last quarter of 1890, was perceptible in the first quarter of 1891, and became serious in the second quarter of that year. Consideration of the death-rates in successive quarters suggests that this rise either began earlier, or was more severe at its commencement, in the urban than in the rural districts. The third great rise in mortality was in the first quarter of 1892, and this time the rural districts showed an enormous excess, their death-rate for the first time on record exceeding the rate in the urban districts. (Table 25.)

Registered Causes of Death.

The deaths, when distributed to the several classes by their assigned causes, gave the rates shown in the following table:—

Table B.—Mortality from the several Classes of Diseases.

Causes of Death.	Total Deaths 1892.	Rate per Million living.											
		1892.	1891.	1890.	1889.	1888.	1887.	1886.	1885.	1884.	1883.	1882.	Mean 1882–91

Ill-defined and not specified causes	25,176	853	899	900	893	891	968	1,064	1,019	1,160	1,198	1,162	1,015·4
All causes	559,684	18,982	20,217	19,548	18,221	18,112	19,074	19,522	19,205	19,664	19,642	19,619	19,282·4

Zymotic or Specific Febrile Diseases.—In the year 1892 the deaths ascribed to this class of disease numbered 82,099, and were in the proportion of 2785 to a million persons living; this proportion showing a further increase on that of the year immediately preceding, which had exceeded the proportion in any other year since 1884. In 1892 there was a decrease in the death-rates from influenza, enteric fever, and whooping-cough; but this decrease was more than counterbalanced by the increased mortality from measles, scarlet fever, diphtheria, and diarrhœal diseases.

After three years of practical immunity from *small-pox*, the deaths in 1892 suddenly rose to 431, and were equal to a rate of 15 per million of the population. Of these deaths 13 per cent. were returned as vaccinated, and 25 per cent. as unvaccinated, while in 62 per cent. no statement as regards vaccination was made. It is much to be regretted that medical men continue to neglect, in so large a proportion of such cases, to give this very desirable item of information. In addition to the above, 123 deaths were attributed to chicken-pox (some of which were, perhaps, mistaken cases of the graver disease) and 58 deaths were referred to effects of vaccination. The total number of deaths either certainly or possibly caused by small-pox, and of deaths alleged to have been caused by the means taken to prevent small-pox during the year 1892, was 612.

The deaths from *measles* in the year 1892 numbered 13,553, and were equal to a rate of 460 per million of the population, which corresponds almost exactly with the mean rate (456 per million) in the previous ten years.

In the 54th Annual Report an interesting comparison was made between certain counties as regards the distribution of measles mortality in a succession of years. Continuing that comparison we find that the disease, which in 1891 had spread through Lancashire, Staffordshire, and the West Riding of Yorkshire, decreased in these counties in 1892; whilst a considerable increase occurred in the neighbouring counties of Warwickshire, Leicestershire, and Derbyshire, in the East and North Ridings of Yorkshire, and also in Westmorland and Durham. The epidemic which had prevailed in Somersetshire, Wiltshire, and Gloucestershire in 1891, disappeared in 1892 from the first two of these counties, but still persisted in Gloucestershire. The increase in Warwickshire noted above was possibly in part due to infection from Gloucestershire. There was an increase of the disease in Dorsetshire (which had suffered severely in 1888, but had been absolutely free from fatal cases in 1890, and had suffered a rate of only 79 per million in 1891); this epidemic does not, however, appear to have extended further eastwards. The measles epidemic which had been exceptionally severe in Cornwall in the course of 1890 and 1891 ceased almost entirely before the beginning of 1892.

The experience of recent years goes to show that, speaking generally, high minimum rates of measles mortality are associated with large unbroken populous areas: the occurrence of high maxima in the same areas points either to gross carelessness or to bad sanitary condition, probably to both. On the other hand, low minimum rates of mortality from measles are apparently associated with populations broken up into detached groups; since the infection may under such circumstances fail to be conveyed from one group to another; in which case the disease may die out for a season.

Scarlet fever.—The deaths from scarlet fever numbered 5618, and were equal to a rate of 190 per million living. This rate was higher than that in 1891, which had been 171 per million, but with this exception was lower than the rate in any previous year on record.

The year 1892 was the eighth successive year in which the deaths from scarlet fever have been under 8000, the average number in the eight years having been 6353, and the average rate 225 per million. The lowest previous rate was 402 per million in the year 1884.

In 1892 not less than 69 per cent. of the London deaths from scarlet fever occurred in Hospitals or in Workhouse Infirmaries, as compared with 60 per cent. in 1891. The type of scarlet fever, as observed at the Metropolitan Asylum Hospitals in 1892 was even milder than it had been in the preceding five years. The mortality amounted to 6·41 per cent. of the cases treated, as compared with 8·56 per cent. in the years 1887–91.

It is noteworthy that the counties which are subject to the highest mortality from measles for the most part show also a like susceptibility with regard to scarlet fever. Thus we find that in 1882–91 the following nine counties showed the highest average rates from measles: London, Staffordshire, Cheshire, Lancashire, the West Riding of Yorkshire, Durham, Cumberland, Monmouthshire, and South Wales. If we omit from this list London, Cheshire, and Cumberland, and add to it Nottinghamshire, Derbyshire, and Northumberland, we have the nine counties with the highest average scarlet fever mortality. The counties of London and Cumberland are remarkable exceptions, for the measles death rate in London during the ten years was 612 per million, whilst the scarlet fever rate did not exceed 291; in Cumberland the measles rate was 481, against 185 for scarlet fever.

As in the case of measles, the mortality from scarlet fever is ordinarily much greater in the northern than in the southern part of the country. If a line be drawn along the southern boundaries of Lincolnshire, Nottinghamshire, Derbyshire, Staffordshire, and Cheshire, the measles rate in 1882–91 averaged less than 400 per million in every county south of this line, except London, Warwickshire, Monmouthshire, and South Wales; and the scarlet fever rate was below 300 per million in every county south of the same line except Leicestershire, Monmouthshire, and South Wales. To the north of the line the measles rates were above 400 in all the counties except Lincolnshire, Nottinghamshire, Derbyshire, the East and North Ridings of Yorkshire, and Westmorland, and very nearly 400 in two of these counties; and the scarlet fever rates were above 300 in all except Lincolnshire, Cheshire, Cumberland, and Westmorland. The most noticeable exceptions (Monmouthshire and South Wales to the south of the line with high rates, and Lincolnshire to the north with low ones), justify the statement that both these diseases show a peculiar tendency to spread amongst mining populations.

A comparison of the county rates in 1892 with those in 1891, shows generally increased scarlet fever mortality in the southern parts of the country, but as the mortality from this disease in these parts was generally very low in 1891, the increase still leaves all the counties except London, Somersetshire, and Gloucestershire with rates below the rate for the whole of England and Wales. In 1892 by far the highest county rates were (as in the previous year also) those of Monmouthshire and South Wales. The rate in North Wales was also excessive in 1892 in consequence of outbreaks in Wrexham, Holywell, and Carnarvon. The only other counties with rates exceeding those of the whole country were Leicestershire, Lancashire, and the West Riding of Yorkshire.

Enteric Fever.—The deaths from enteric (typhoid) fever during the year 1892 numbered 4037, and corresponded to a rate of 137 per million of the population, the rate in 1891 having been 168. The interval between the year 1869, when enteric fever was first separately classified, and the year 1891 may be usefully divided into three periods as regards differences in the mortality from that disease; the maximum rate in the second period having been lower than the minimum in the first, and the maximum rate in the third period, lower than the minimum in the second.

TABLE C.—MORTALITY from ENTERIC FEVER in ENGLAND and WALES, 1869–91.

	Mean Rate per Million.	Highest Rate per Million.	Lowest Rate per Million.
10 years 1869–1878	354	390	279
6 „ 1879–1884	233	261	212
7 „ 1885–1891	177	185	168

It might at first sight appear probable that the drop from 168 per million in 1891 to 137 in 1892, was the beginning of a fourth period of still lower enteric fever mortality. Such an assumption, however, would be unjustifiable, for the provisional numbers of deaths from "fever" (including typhus, enteric, and ill-defined fevers), furnished by the several registrars for the Registrar-General's Quarterly returns, show a large increase in 1893, bringing the probable mortality from enteric fever in that year very nearly up to the mean level of the second of the above-mentioned periods (1879–84). At present, therefore, we can safely deal only with the fact that the mortality from enteric fever was much lower in 1892 than in any previous year.

As in previous years, the highest county death-rates from enteric fever were in the northern parts of England and Wales, although all these rates were lower in 1892 than they had been in 1891. The five highest rates were in Nottinghamshire, Cheshire, Lancashire, the East Riding of Yorkshire, and Durham, and these counties, with the addition of the North Riding of Yorkshire and Northumberland, had shown the seven highest rates in 1891. In the North Riding the rate fell from 516 in 1890 and 344 in 1891, to 156 in 1892. The rate in Northumberland fell from 218 in 1890, and 240 in 1891, to 118 in 1892.

In addition to the five counties named above as showing the highest enteric fever rates in 1892, seven counties had rates exceeding the rate in the whole country, viz:—Norfolk, Devonshire, Staffordshire, Derbyshire, the West and North Ridings of Yorkshire, and South Wales. In all of these twelve counties, however, except Norfolk, Devonshire, and Derbyshire, the rates in 1892 were lower than those of the previous year.

In several counties, notably in Hampshire, Berkshire, Middlesex, Hertfordshire, Bedfordshire, Norfolk, Wiltshire, Devonshire, Cornwall, Somersetshire, Herefordshire, and Derbyshire, the rates in 1892 exceeded those in 1891; but, as will be seen by comparison with the preceding list, only three of these increased rates were as high as the average rate for the whole country. Careful examination of the figures in the Table on pp. 160–192 shows the increased rates to have been due to outbreaks, in some cases very severe in character, but generally affecting small areas only.

In the last two reports of the Registrar-General, attention was drawn to a group of 18 registration districts, extending from Morpeth to Middlesbrough and Guisborough, in which there had been excessive enteric fever mortality for some years. The mortality from enteric fever during the three years 1890–1–2, in these districts taken as a group, was as follows:—

TABLE D.—MORTALITY from ENTERIC FEVER in a GROUP of 18 REGISTRATION DISTRICTS, 1890–1–2.

Year.	Deaths.	Rates per Million.
1890	601	394
1891	465	300
1892	285	180

In the year 1892 the rate in this group of districts was still in excess of the rate for the whole country, but it only slightly exceeded the average in the period 1885–1891 (see Table C). Taking the districts separately, the decline has been general, Morpeth and the contiguous districts of Sunderland and Easington being the only instances of notable excess in the year 1892.

The deaths from *diphtheria* in the year 1892 numbered 6552, and were in the proportion of 222 per million. This is the first time since the year 1864 that the diphtheria rate has reached 200 per million. Part of the

increase of the diphtheria death-rate in recent years is, doubtless, due to transference from "croup," to which cause 2235 deaths were referred in the year 1892. Taking diphtheria and croup together, the rate in 1892 was equal to 298 per million, and exceeded that in the previous year by 34 per million; it was, however, exactly equal to the mean rate in the four years 1887–90, and was below the mean in the 27 years 1865–91, which had been 311.

There can be no doubt that diphtheria was more fatal in 1892 than in either of the preceding two years, and the provisional figures obtained from the registrars point to a still more serious rise in 1893.

There were several changes in the local incidence of diphtheria in 1892. Of the sixteen counties which had shown the highest rates in 1891, only nine (London, Surrey, Sussex, Middlesex, Hertfordshire, Buckinghamshire, Essex, Suffolk, and Gloucestershire) were among the sixteen with the highest rates in 1892. But of these nine, not fewer than eight are in the south-eastern continuous area of high diphtheritic rates referred to in the 47th Report. In the year 1892 this area was diminished by the removal of Norfolk, but was extended by the addition of Kent, Berkshire, Oxfordshire, Huntingdonshire, and Bedfordshire. The south-eastern diphtheritic region appears, therefore, persistently to deserve that title. Its boundaries change slightly from year to year, but it always includes London and some of the neighbouring counties. What has been described as the western diphtheritic region appears to be less constant. In 1892 it was represented by the continuous, but not very compact, area of Monmouthshire, Gloucestershire, Worcestershire, and Shropshire, in all of which counties, however, the diphtheria rates in 1892 were below the average for England and Wales. In the northern part of the country the diphtheria rates were generally low, only one county (Durham) having a rate approaching that of England and Wales.

The deaths from *whooping-cough* numbered 13,406 and were in the proportion of 455 to a million living, or nearly the same as with the rate from measles, which as already stated was 460 per million. In the decennium 1882–91 the mean death-rates from these two diseases had been exactly identical, namely, 456 per million; their local distributions, however, although following somewhat similar lines, present some remarkable differences. For example:—the fifteen registration counties which suffered most severely from measles in the ten years 1882–91, are, in the order of their death rates, Lancashire, Monmouthshire, London, Staffordshire, Durham, Cumberland, Cheshire, South Wales, the West Riding of Yorkshire, Warwickshire, Northumberland, Nottinghamshire, Gloucestershire, Middlesex, and Worcestershire. If we remove Cheshire, Gloucestershire, and Worcestershire from this list, and add to it Essex, Cornwall, and Cambridgeshire, we have the fifteen counties which suffered the highest average death-rates from whooping-cough. While, however, in the case of measles, Lancashire, Monmouthshire, and London head the list with average rates of 734, 644, and 612 per million respectively, in the case of whooping-cough the three highest average rates were 709 in London, and 545 in Essex and also in Cornwall, Lancashire coming fourth, with a rate of 526. But in spite of these differences of detail, the general fact remains that, like measles, whooping-cough is most fatal in large centres of population and in mining districts.

Of the ten counties, viz., Staffordshire, Monmouthshire, Lancashire, London, Derbyshire, the East Riding of Yorkshire, Nottinghamshire, Essex, Cheshire, and South Wales, with the highest death-rates from whooping-cough in 1892, all except Lancashire and London had in the previous year shown rates below that for the whole country. Conversely, of the ten counties which had shown the highest rates in 1891, all except London and

Lancashire showed comparatively low rates in 1892. The outbreaks during 1892 in Staffordshire, Derbyshire, and Nottinghamshire appear to have extended from Worcestershire, Warwickshire, and Leicestershire, in all of which counties the rates had been high in 1891.

Influenza.—As had also been the case in the preceding two years, the year 1892 was marked by severe prevalence of influenza, accompanied by great increase in the mortality from certain other diseases, notably those of the respiratory organs. It is therefore advisable again to discuss the mortality from influenza in conjunction with that from diseases of the respiratory class; and we shall not be far wrong if we consider the excess of mortality from these combined causes as representing approximately the severity of the influenza epidemic. It will be convenient to use the year 1889 as a standard of comparison, both because it may be regarded as a year of approximately normal mortality, and because it immediately preceded the first outbreak of influenza.

It would be impossible within the limits of this report to trace the course of the epidemic in great detail, but by a division of the country into three sections we shall be enabled to present with greater clearness some of the more important facts. The three sections here referred to are (1) the first registration division, consisting of Registration London; (2) the second, third, fourth, and fifth registration divisions, comprising the remainder of the southern part of the country, and bounded by an irregular line drawn from the Wash to the Bristol Channel; (3) the remainder of the registration divisions, comprising the part of the country to the north of this boundary.

The first outbreak of influenza, which occurred early in the year 1890, was specially fatal in London and in several of the large towns in both the southern and northern parts of England and Wales; of the three above-defined sections of the country London suffered most, and the southern counties least, severely. The second and much more serious outbreak, in the second quarter of 1891, again attacked London and the large towns, the greatest excess of mortality in the three sections of the country being again in London, and the next greatest in the northern counties. The third outbreak, in the first quarter of 1892, affected London to about the same extent that the first outbreak had done, and the northern counties to a somewhat less extent; but it affected the southern counties, and particularly their rural parts, with great severity. A short Table will make this clear.

TABLE E.—MORTALITY per 1000 living, attributed to INFLUENZA and DISEASES of the RESPIRATORY ORGANS, in the 4 Years 1889–92.

	Rates per 1000 in each Year.				Excess in 1890-1-2, the rates in 1889 being taken as Standard.			
	1889.	1890.	1891.	1892.	1890.	1891.	1892.	Mean of 3 Years.
London (Division I.)	3·68	5·06	5·85	5·06	1·38	2·17	1·38	1·64
Southern Counties (Divisions II.-V.)	2·44	3·17	3·69	4·16	0·73	1·25	1·72	1·23
Northern Counties (Divisions VI.-XI.)	3·84	4·82	5·68	4·52	0·98	1·84	0·68	1·17
England and Wales	3·42	4·39	5·12	4·49	0·97	1·70	1·07	1·25

From Table E. it further appears that the maximum severity of the epidemic, as measured by the excess of mortality from these diseases, did not greatly differ in the three sections of the country, being represented by 2·17 per 1000 in London in 1891, by 1·84 in the northern counties in the same year, and by 1·72 in the southern counties in 1892. Taking together the three outbreaks of influenza the loss of life was relatively greatest in London; whilst it was rather greater in the southern than in the northern counties.

An estimate of the probable loss of life due to the influenza outbreaks in 1890 and 1891, based on the excess of mortality at ages above 35, in those years as compared with the decennial average, was made in the last Annual Report. The excess of mortality from influenza and diseases of the respiratory organs in the three years 1890–1–2, as computed in Table E., leads to an estimate on a somewhat higher scale; for the mean annual excess of mortality in England and Wales attributed to these causes in the three years was 1·25 per 1000 living, and this would represent nearly 110,000 deaths. Any such estimate must, of course, be largely conjectural; since we have no means of ascertaining what the mortality would have been from respiratory diseases or from other causes had there been no epidemic of influenza. Certain general considerations, however, lead to the conclusion that the above is by no means an excessive estimate. In the first place, the first outbreak occurred in a quarter which was exceptionally mild for the time of year, and therefore unlikely to be marked by special prevalence of respiratory diseases; and the second outbreak attained its greatest severity during a season when the mortality from respiratory diseases is usually low. In the second place, the mortality from the principal zymotic diseases, including diarrhœa (these being the chief causes, other than respiratory diseases, of annual fluctuations of mortality), was lower in 1890–1–2 than in 1889. And in the third place, many deaths which were in reality due to the epidemic were doubtlessly ascribed to diseases of the nervous, circulatory, and other organs, in addition to those referred to diseases of the organs of respiration. It may be regarded as probable that the actual mortality due to influenza in England and Wales in the three years 1890–1–2 was not less than 110,000, and it is at least possible that it considerably exceeded this number.

The deaths referred to *diarrhœal complaints* (diarrhœa, dysentery, and cholera), numbered 15,336, and were in the proportion of 520 per million of the population. With four exceptions, viz., in the years 1879, 1885, 1888, and 1891, the rate from diarrhœal diseases in 1892 was lower than any recorded in the previous 45 years.

Only 6 deaths were referred to *hydrophobia*, the numbers in the two preceding years having been 8 and 7 respectively. With the single exception of the year 1868, when the number was 7, these were by far the lowest figures recorded since 1863, the yearly average in the 28 years, 1864–91, having been 32.

To *puerperal fever* 2356 deaths were referred in the year 1892, and to the various accidents of childbirth 2838. These deaths, taken together, numbered 5194, and were equal to a mortality of 5·78 to 1000 registered births, which is a higher rate than that of any year since 1875.

Parasitic Diseases.—The deaths thus classified numbered 617, of which 479 were referred to thrush and 138 to other parasitic diseases. The mortality attributed to this class of disease was lower in 1892 than in any previous year on record.

Dietetic Diseases.—The deaths referred to the dietetic class of disease in 1892 numbered 2325, and corresponded to an annual rate of 79 per million

living, as compared with 67, the mean rate in the ten years 1882–91. (Table B.) Of these 2325 deaths the number directly ascribed to intemperance was 1971, being in the proportion of 67 per million living. The rates in 1890 and 1891 had been slightly higher than this, but with these two exceptions the rate in 1892 was higher than in any previous year on record. (Table 16.)

Constitutional Diseases.—The deaths referred in 1892 to this large and important class of disease numbered 93,420, and were equal to a rate of 3168 per million of the population. The deaths from cancer in 1892 numbered 20,353, and corresponded to an annual rate of 690 to a million living; this rate is slightly lower than that of 1891, but with this exception it is the highest rate on record. Diabetes caused 2011 deaths in the year 1892, the rate being equal to 68 per million, which is the highest recorded rate from this disease. The deaths from phthisis numbered 43,323, and corresponded to a rate of 1468 per million living, which is the lowest rate on record.

Developmental Diseases.—To this class 47,885 deaths, or 1624 per million of the population, were ascribed in 1892. The deaths referred to old age, simply, numbered 27,866, and corresponded to a rate of 944 per million living, as compared with 977 and 1011 respectively in the years 1890 and 1891. In the 54th Report attention was called to the constantly increasing frequency of deaths from premature birth, and also in a less degree from congenital defects, the mortality per 1000 births under both these headings having steadily increased for a great number of years, until in 1891 it stood at 18·00 from premature birth, and 3·60 from congenital defects. In the year 1892, these rates were exceeded, the figures reaching 18·46 from premature birth and 3·83 from congenital defects.

Local Diseases.—To this class 288,920 deaths or 51·6 per cent. of the deaths from all causes were assigned in the year 1892. These deaths corresponded to a rate of 9801 per million of the population, a rate decidedly lower than the exceptionally high rates of 1890 and 1891, and also slightly below the mean (9930 per million) of the rates in the ten years 1882–91. (Table B.) The deaths from diseases of the respiratory system (exclusive of croup) numbered 114,536, and were in the proportion of 3884 per million living. This proportion, whilst considerably lower than the excessive rates of the preceding two years, was nevertheless higher than the mean rate (3699) in the ten years 1882–91. Diseases of the nervous system, exclusive of convulsions, caused 47,809 deaths, corresponding to a rate of 1622 per million living. This is the lowest rate from nervous diseases since the year 1869. To diseases of the circulatory system 49,648 deaths, or 1684 per million living were referred. The deaths from these diseases in 1892 were proportionally fewer than in the preceding two years, but as compared with the mean of the ten years 1882–91, the 1892 rate still showed an excess of 62 per million. The deaths from diseases of the urinary system numbered 13,242 and corresponded to a rate of 449 per million, which is considerably lower than the rate of 1891, but slightly in excess of the mean (443) for the ten years 1882–91.

Violence.—The deaths referred during 1892 to accident or negligence numbered 16,343, and were equal to a rate of 553 per million of the population, which was somewhat lower than the average (558) in the previous decennium. The deaths ascribed to homicide numbered 300, or 10 per million of the population. The verdict in 162 of these cases was murder, and in 138 manslaughter, the exact verdict in two of the latter having been "excusable homicide." In respect of the 162 murders there were 16 executions.

Ill-defined and Unspecified Causes.—In 25,176 cases, or 4·5 per cent. of the total deaths, the cause of death was so unsatisfactorily stated as to be useless for purposes of scientific classification—the deaths are therefore referred to this heading. The average proportion in the ten years 1882–91 had been 5·2 per cent. The reduction was probably in great measure due to the issue from this office of 3523 letters of inquiry addressed to medical men concerning doubtful or obscure certificates of cause of death in 1892; the result of which proceeding has been the transference of a large number of entries from indefinite to definite headings. Thus, for example, 528 deaths were removed from more or less vague headings to cancer (or malignant disease), 93 to syphilis, and 218 to puerperal fever and accidents of childbirth.

Certification of Causes of Death.—Of the 559,684 deaths registered during the year 1892, the causes of 512,691, or 91·6 per cent., were certified by registered medical practitioners, and the causes of 31,892, or 5·7 per cent., by coroners after inquest, while the causes of the remaining 15,101 deaths, or 2·7 per cent., were not certified. The 15,101 uncertified cases in 1892 included deaths of infants who had been attended only by midwives, and those of persons attended by unregistered practitioners, as well as those of persons who had received no medical attendance of any kind in their last illness. In registration counties the proportions per cent. of uncertified deaths ranged from 0·8 in Middlesex, and 0·9 in London and in Wiltshire, to 4·3 in Derbyshire and in South Wales, 4·4 in Westmorland, 4·6 in Warwickshire, 4·8 in Herefordshire, and 5·7 in North Wales. Among counties in which the proportion of uncertified deaths was greater in 1892 than it had been in 1891 were Norfolk, Somersetshire, Warwickshire, Derbyshire, and the North Riding of Yorkshire; while considerable decrease was shown in Hertfordshire, Huntingdonshire, Gloucestershire, Lincolnshire, and Cumberland.

Offences against the Registration Act of 1874.—In 1892, 28 persons, on prosecution by order of the Registrar-General, were convicted of different offences against the Registration Acts, as under:—

For failing to give information for registration, and to comply with registrars' requisitions	2
For giving false information for registration	14
For refusing to give particulars necessary to complete the registration of a birth	1
For making and giving false certificates of cause of death	7
For burying as still-born a child born alive	1
For causing two bodies in one coffin to be buried without delivery of statutory notice	1
For giving false declarations of still-birth	2
	28

Progress of Registration.

The names in the alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales were increased in the year 1892 by 1,911,911, this addition raising the aggregate number of names in the indexes, which at the end of 1892 embraced a period of 55½ years, to 85,131,549. The number of searches in 1892 in the various registers was 50,942, exceeding the number in the previous year by 4442. The number of certificates issued was 34,678, showing an increase of 1967 on the number in 1891. The fees received for searches and certificates in 1892 and paid into Her Majesty's Exchequer amounted to 6,921*l.* 15*s.*,

exceeding the amount received in the previous year by 463*l.* 4*s.* 6*d.* (Table 26.)

A list of the various public registers and records lodged in the General Register Office, Somerset House, was published in the 34th Annual Report, pages xxi–xxii.

Mortality in the Army.*

The average strength of the Army, at home and abroad, was 213,540, and the deaths were 1950, the rate of mortality thus being 9·1 per 1000, against 8·7 and 8·9 respectively in the preceding two years. The mortality in the Army abroad was 13·5 per 1000, a rate 0·9 per 1000 above the mean rate in the three years 1889–91; while the rate in the Army at home was 4·7 per 1000, against 6·0 and 5·4 in the preceding two years. (Table 29.)

Mortality in the Navy.†

The average force afloat in 1892 was 58,330. The deaths were 326, being in the proportion of 5·59 per 1000 of the strength. Of the 326 deaths, 258 were due to disease, and 68 to violence; the death-rate from disease was therefore 4·42 per 1000, and that from violence 1·17 per 1000.

Of the 68 deaths from violence, 28 resulted from accidental drowning, 6 from heatstroke, 27 from other accidental causes, and 7 from suicide.

Births and Deaths of British Subjects at Sea.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of ships trading to or from British ports are required, under a penalty, to transmit returns of all births and deaths occurring on board their ships to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of England, Scotland, and Ireland. Similar returns are furnished by persons having charge of Her Majesty's Ships directly to the Registrars-General of Births and Deaths. Such returns of births and deaths at sea constitute the "Marine Register Book." During the year 1892, 267 entries of birth and 4073 of death were added to this Register. Of the 4073 deaths, so far as could be judged from the entries, which are not always very precise, 1713 were of persons of English origin, while 188 others were of persons of British origin.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of masters and seamen afloat in registered vessels belonging to the mercantile marine of the United Kingdom, including the islands in the British Seas, during the year 1892 was 241,735, showing an increase of 1255 upon the number in the preceding year. The reported deaths among masters and seamen during 1892 numbered 3452, showing a rate of 14·3 per 1000 of the strength. This rate, though exceeding the mean rate in the five years 1887–91 by 0·3 per 1000, was lower than that in any year prior to 1888, with the single exception of the year 1852. (Table 31.)

Among *passengers* on board merchant vessels at sea 77 births and 412 deaths were reported in 1892, the births being 10 below, and the deaths 26 above, the numbers recorded in the preceding year. (Table 32.)

* Based upon returns furnished by His Royal Highness the Commander-in-Chief.

† Based upon returns furnished by the Director-General of the Medical Department of the Navy.

International Vital Statistics.

In Tables 39–56 will be found international vital statistics concerning the marriages, births, and deaths, and their rates per 1000 of the population, in most of the European States.

A comparison of the death-rate in 1892, in each country from which returns were received, with the death-rates in preceding years, shows that the mortality was generally somewhat above the average of recent years. In Denmark and in Switzerland the rates were lower than in 1891, while in France and in Italy there was no change; but Norway, Austria, the German Empire, the Netherlands, and Belgium all experienced an increased mortality.

In previous reports it has been pointed out that as the sex and age distribution of the population varies greatly in different countries, and as the rates largely depend on such distribution, the rates in one country cannot safely be compared with the rates in another, without correction for this difference in the constitution of the several populations.

In order to allow of fair comparison, it is most desirable that the several countries should agree upon some "Standard or Life Table population," that is to say, a population with fixed age and sex distribution, for international use; so that the birth, marriage, and death rates for each country may be calculated by this standard. I recommend this suggestion to the notice of the respective Governments.

I have the honour to be,

Sir,

Your faithful Servant,

BRYDGES P. HENNIKER,

General Register Office, Somerset House, *Registrar-General.*

29th March, 1894.

Remarks on the Meteorology of the Year 1892.*

By James Glaisher, Esq., F.R.S., &c.

The following remarks, both with regard to atmospheric pressure and temperature, are based on observations made near London, but they may be taken as having a general application.

Atmospheric Pressure.—The readings of the barometer were below their averages till the 22nd of January, the mean daily deficiency being 0·21 in.; from January 23rd to the 31st it was above, the mean daily excess being 0·23 in.; from February 1st to March 16th it was generally below, being particularly so on the 2nd, 3rd, 18th, 19th, and 20th of February; and on the 10th and 13th of March, when it was as much as 0·67 in., 0·65 in., 0·80 in., 0·72 in., 0·62 in., 0·81 in., and 0·73 in. respectively below, the mean daily deficiency for the 45 days ending March 16th being 0·22 in.; from March 17th to April 5th it was generally above, the mean daily excess being 0·23 in.; from April 6th to the 17th it was below, the mean daily deficiency being 0·11 in.; from April 18th to June 15th it was generally above, the mean daily excess for these 59 days being 0·06 in.; from June 16th to July 20th it was generally below, the mean daily deficiency being 0·08 in.; from July 21st to August 12th it was above, the mean daily excess being 0·16 in.; from August 13th to November 6th it was generally below, the mean daily deficiency for these 86 days being 0·12 in.; from November 7th to December 2nd it was generally above, the mean daily excess being 0·16 in.; from December 3rd to the 13th it was generally below, the mean daily deficiency being 0·19 in.; from December 14th to the 28th it was above, the mean daily excess being 0·10 in.; and from December 29th to the 31st it was below its average, the mean daily deficiency being 0·21 in.

The highest reading of the barometer at the height of 150 feet above the sea was 30·368 ins. on March 31st; and the lowest was 28·962 ins. on February 18th. The yearly range was 1·406 in.

Temperature.—The temperature of the air was below its average till the 21st of January, being particularly so on the 9th, 10th, and 12th, when it was as much as 8°·3, 9°·6, and 9°·7 respectively below, the mean daily deficiency for the 21 days being 4°·4; from January 22nd to February 11th it was generally above, being particularly so on the 24th, 29th, 30th, and 31st of January, and on the 7th of February, when it was as much as 8°·2, 9°·7, 8°·9, 8°·0, and 8°·5 respectively above, the mean daily excess for the 21 days ending February 11th being 3°·5; from February 12th to 31st of March it was generally below, being particularly so from the 16th to the 20th of February, and from the 2nd to the 13th of March, the mean daily deficiency for these 17 days being 10°·9; and the mean daily deficiency for the 49 days ending March 31st being 4°·6; from April 1st to the 11th it was above, being particularly so on the 4th, 5th, and 6th, when it was as much as 8°·2, 10°·9, and 8°·3 respectively above, the mean daily excess for the 11 days ending April 11th being 4°·8; from April 12th to the 20th it was particularly below, the mean daily deficiency being 8°·6; from April 21st to the 24th it was above, being as much as 9°·1 above on the 22nd, the mean daily excess being 6°·0; from April 25th to May 7th it was below, being particularly so on the 28th and 29th of April and on the 5th and 6th of May, when it was as much as 9°·7, 9°·3, 9°·7, and 9°·3 respectively below, the mean daily deficiency for these 13 days being 6°·7; from May 8th to June 11th it was above its average, being as much as 14°·7 and 16° above on the 28th and 31st of

* For Meteorological Tables, *see* pp. lviii–lxiii.

May respectively, while on several other days it was as much as 10° and 11° above, the mean daily excess for the 35 days ending June 11th being 4°·2; from June 12th to August 13th it was generally below, being as much as 8° and 9° below on several days, the mean daily deficiency for these 63 days being 2°·8; from August 14th to the 25th it was generally above, the mean daily excess being 1°·7; from August 26th to September 9th it was below, the mean daily deficiency being 3°·3; from September 10th to the 27th it was generally above, the mean daily excess being 1°·6; from September 28th to October 27th it was below, being particularly so on the 18th, 19th, 24th, and 25th of October, when it was as much as 10°·6, 11°, 11°·3, and 12°·1 respectively below, and on several other days it was as much as 7°, 8°, and 9° below, the mean daily deficiency for the 30 days ending October 27th being 6°·7; from October 28th to November 17th it was generally above, being particularly so on the 28th and 29th of October, and on the 14th, 15th, and 16th of November, when it was as much as 8°·3, 9°·4, 9°·4, 10°·4, and 8°·0 respectively above, the mean daily excess for the 21 days ending November 17th being 2°·8; from November 18th to December 14th it was generally below, being particularly so on the 5th and 6th of December, when it was as much as 10°·4 and 9°·1 respectively below, the mean daily deficiency for these 27 days being 2°·6; from December 15th to the 21st it was above, being as much as 10°·3 above on the 15th, the mean daily excess being 4°·8; and from December 22nd to the 31st it was below, being particularly so from the 24th to the 30th, the mean daily deficiency for these 7 days being 10°·8; and the mean daily deficiency for the 10 days ending December 21st being 9°·1.

The highest temperatures of the air were at Cambridge 87°·0, at Blackheath 86°·8, and at Royston 86°·0; and the lowest were at Carlisle — 1°·0, at Stonyhurst 8°·1, and at Somerleyton 9°·6.

Rainfall.—The fall of rain was below its average in January, above in February, and below its average again in March; the total fall in the three months at Greenwich was 3·16 ins., or 1·79 in. below the average. The fall of rain was below its average in both April and May, and above its average in June; the total fall in the three months at Greenwich was 5·35 ins. or 0·43 in. below the average. The fall of rain was below its average in July, above in August, and below its average again in September. The total fall in the three months at Greenwich was 6·58 ins. or 0·74 inch below the average. The fall of rain was above its average in October, and below its average in both November and December; the total fall for the three months at Greenwich was 7·23 ins. or 0·15 inch above the average.

The heaviest falls of rain in the year at our stations were at Stonyhurst 48·68 ins., at Carlisle 34·88 ins., and at Halifax 34·59 ins.

The least falls were at Whitchurch 19·87 ins., at Oxford 20·73 ins., and at Nottingham 21·57 ins.

The greatest number of days of rain were at Liverpool 212, at Nottingham 203, and at Llandudno 200.

The smallest number of rainy days were 121 at Oxford, 134 at Barnet, and 136 at Osborne.

Thunderstorms occurred on 49 days at the different stations during the year; of these 10 were in June, 7 in each of the months of May, September, and October, 6 in July, 5 in August, 3 in both February and April, one in January, and none were reported in either March, November, or December.

Thunder was heard but lightning was not seen on 54 days during the year; of these 13 were in June, 9 in August, 7 in April, 6 in each of the months of May, July, and September, 4 in October, 2 in February, and one in March.

Lightning was seen but thunder was not heard on 49 days during the year; of these 8 were in both August and October, 7 in September, 6 in February, 5 in June, 4 in July, 3 in both March and May, 2 in both January and April, and one in November.

Solar halos were seen on 117 days during the year; of these 21 were in April, 16 in May, 12 in July, 10 in February, 9 in both March and June, 8 in each of the months of August, October, and December, 7 in both September and November, and 2 in January.

Lunar halos were seen on 69 days during the year; of these 11 were in November, 9 in both May and December, 8 in April, 7 in each of the months of February, March, and October, 6 in January, 2 in both July and September, and one in August.

Snow fell on 84 days during the year; of these 19 were in March, 16 in January, 15 in December, 14 in February, 13 in April, 3 in October, and 2 in both May and November. The last fall in the spring was on May 16th at Halifax; none fell in June, July, August, or September; and the first fall in the autumn was on October 23rd at Hereford.

Hail fell on 94 days during the year; of these 17 were in February, 12 in April, 11 in each of the months of January, March, and October, 9 in June, 7 in both May and December, 6 in September, 2 in November, and one in July.

Fog prevailed on 152 days during the year; of these 22 were in both November and December, 19 in January, 14 in February, 12 in both April and August, 11 in September, 10 in both June and October, 9 in March, 6 in May, and 5 in July.

* Deaths from Relapsing Fever prior to 1869 were classed with "Simple and Ill-defined Fever," and deaths from Cerebro-spinal Fever prior to 1877 were classed with Typhus, but, since those dates, have been included under this heading.

† Deaths of children under 5 years of age from Remittent Fever were classed with Enteric Fever from 1869 to 1880, but in previous and subsequent years have been included under this heading.

TABLE 15 *(continued)*.—ENGLAND.—**Deaths from Various Causes, 1868-92.**

CAUSE OF DEATH.	1868.	1869.	1870.	1871.	1872.	1873.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.

1872	203,720	4,123	20·2				

NOTE.—*Up to and including* 1886 masters were excluded from the above employment and mortality figures; the latter of which contained some cases of men who died in colonial vessels and fishing vessels not registered under the Merchant Shipping Acts, whose crews are not included in the employment column.
Since 1886 masters are included in both columns, and the employment and mortality figures relate only to persons employed in vessels registered under the Merchant Shipping Acts belonging to the United Kingdom, the Isle of Man, and Channel Islands. Deaths on vessels employed on river or in inland navigation and on yachts are not included.

TABLE 32.—MERCHANT SERVICE. **Births** and **Deaths** at **Sea** among **Passengers (British Subjects), 1857–92.**

(Furnished to the Registrar-General by the Registrar-General of Shipping and Seamen.)

* The prices of Consols for the years 1841-52 relate to the 12 months beginning 1st April; from 1853 onwards the prices relate to calendar years. For the years 1841-88 the prices relate to stock bearing 3 per cent. interest, for 1889-92 to stock bearing 2¾ per cent.

† From the Board of Trade Statistical Abstract.

‡ The prices of coal are derived from Parliamentary Returns furnished by the Registrar of the London Coal Market, by order of the House of Commons.

§ Derived from Returns, published by the Local Government Board, of the number of persons in receipt of Relief on the last day of each week.

INTERNATIONAL VITAL STATISTICS.

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating thereto are included in this Table from 1860. Previously to 1st January 1960, children who died within 24 hours after birth were counted as still-born.

* Census year.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census year. † Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

NOTE.—Statistics for the 7 years 1871-77 were not issued owing to the disturbed state of the country. The decline in registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred in that year.

* Census year.

NOTE.—The numbers for Rome were first included with those for the Kingdom of Italy in 1872. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for the end of each of the other years the population is estimated on the assumption that the rate of increase which prevailed in the last inter-censal period has since been maintained.

* Census year.

TABLE 57.—ENGLAND. **Changes** in the **Constitution** of **Registration Districts** and **Sub-districts** during the Year **1892.**

N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.
(2.) The Populations quoted are the revised Numbers enumerated at the Census of 1891.

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
		1892.	
17	WHITECHAPEL	1 January	The sub-districts of *Goodman's Fields* and *Aldgate* were united under the name of *Goodman's Fields* (population 13,800).
142	WYCOMBE	1 October	The parishes comprised within the Superintendent Registrar's District of WYCOMBE were re-arranged into four sub-districts, viz.:—1. *Wycombe* sub-district, consisting of the parishes of Wycombe, Chipping Wycombe, West Wycombe, Hughenden, and Little Missenden (aggregate population 21,909); 2. *Marlow* sub-district, consisting of the parishes of Great Marlow, Little Marlow, Wooburn, Hedsor, Fingest, Turville, and part of Stokenchurch (aggregate population 10,074); 3. *Princes Risborough* sub-district, consisting of the parishes of Princes Risborough, Monks Risborough, Wendover, Stoke Mandeville, Great and Little Hampden, Ellesborough, and Great and Little Kimble (aggregate population 7,172); and 4. *Stokenchurch* sub-district, consisting of the parishes of Bradenham, Ibstone, Bledlow, Chinnor, Horsendon, Illmire, Radnage, Saunderton, and part of Stokenchurch (aggregate population 5,236).
197	LEXDEN	1 May	The parishes of Aldham, Chappel, and Great Tey (aggregate population 1,479) were transferred from *Fordham* sub-district to *Stanway* sub-district, and the sub-district of *Dedham* was added to the remaining portion of *Fordham* sub-district.
198	HALSTEAD	1 July	The parish of Great Maplestead (population 406) was transferred from the sub-district of *Halstead* to that of *Hedingham*.
267	MILDENHALL	1 January	The sub-districts of *Worlington* and *Lakenheath* were united under the name of *Mildenhall* (population 8,559).
378	MARTLEY	1 July	The sub-districts of *Martley* and *Witley* were united under the name of *Martley* (population 6,082).
379	WORCESTER	1 April	The sub-districts of *South-west Worcester* and *North Worcester* were united under the name of *Worcester* (population 43,966).
402 403 408 409	BILLESDON BLABY BARROW-UPON-SOAR LEICESTER	1 January	The district of LEICESTER was extended under the provisions of the Leicester Extension Act, 1891, cap. c., viz.:—Parts of the parishes of Evington and Humberston from the *Billesdon* sub-district of BILLESDON, and of the parish of Belgrave from the *Rothley* sub-district of BARROW-UPON-SOAR (aggregate population 13,862) were added to *East Leicester** sub-district; and parts of the parishes of Knighton and Aylestone from the *Wigston* sub-district of BLABY, part of the parish of Braunstone, the parishes of Freake's Ground and Newfound Pool from the *Enderby* sub-district of BLABY, and the parish of Leicester Abbey from the *Rothley* sub-district of BARROW-UPON-SOAR (aggregate population 13,692) were added to *West Leicester** sub-district.
449 450	NANTWICH CHESTER.	1 July	The parishes of Reeston, Burwardsley, Eaton, Rushton, Tarporley, Tilstone Fearnall, Tiverton, and Utkinton (aggregate population 4,103) were transferred from the *Bunbury* sub-district of NANTWICH to the *Tattenhall* sub-district of CHESTER.

* The parts of Evington, Humberston, and Belgrave added to *East Leicester* were re-named North Evington, West Humberston, and Belgrave respectively; the parts of Knighton and Aylestone added to *West Leicester* were re-named Knighton and Aylestone respectively; the part of Braunstone added to *West Leicester* was merged in the parish of St. Mary Leicester, and the parish of Freake's Ground added to *West Leicester* was merged in the parish of Leicester Abbey. The remainders of the parishes of Belgrave, Knighton, and Aylestone were merged in other parishes in the districts to which they originally belonged.

Table 57.—ENGLAND. Changes in the Constitution of Registration Districts and Sub-districts during the Year 1892—*continued.*

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
		1892.	
451	WIRRAL	1 December	The old sub-district of *Eastham* was divided into two sub-districts, viz.:—The new sub-district of *Eastham*, consisting of the parishes of Great Sutton, Little Sutton, Whitby, Overpool, Netherpool, Childer-Thornton, Hooton, and Eastham (aggregate population 10,046), and the new sub-district of *Bebington*, consisting of the parishes of Bromborough, Brimstage, Poulton-cum-Spittle, Lower Bebington, Higher Bebington, and Storeton (aggregate population 12,194).
470	ROCHDALE	1 August	The sub-districts of *Butterworth Freehold Side* and *Butterworth Lordship Side* were united under the name of *Butterworth* (population 9,438).
497A 497B	BRADFORD NORTH BIERLEY	1 January	The BRADFORD District was divided into two Registration Districts, viz.:—BRADFORD REGISTRATION DISTRICT, consisting of the parishes, townships, or places in the Bradford Union (aggregate population 202,975), and NORTH BIERLEY REGISTRATION DISTRICT, consisting of the parishes, townships, or places in the North Bierley Union (aggregate population 138,906).
577	EAST WARD	1 January	The parish of Asby (population 424), was transferred from the sub-district of *Orton* to that of *Appleby*.
580	CHEPSTOW	1 June	The sub-district of *Chepstow* was dissolved, and of the parishes of which it was constituted Tidenham and Lancaut (aggregate populaton 1,740) were added to *Lydney* sub-district, and the remaining parishes, viz.:—Trelleck Grange, Tintern Parva, Chapel Hill, Penterry, St. Arvans, St. Kingsmark, St. Arvans Grange, Chepstow, Mounton and Mathern and St. Pierre (aggregate population 5,442) were added to *Shire Newton* sub-district, which was re-named *Chepstow* sub-district.
584	PONTYPOOL	1 March	The parish of Panteg (population 3,746) was transferred from *Pontypool* sub-district to *Llangibby* sub-district.
598	NARBERTH	1 January	The parishes of Llanfallteg East and Llanfallteg West (aggregate population 377) were transferred from the sub-district of *Llanboidy* to that of *Narberth*, and the remainder of *Llanboidy* sub-district was united with *Llandissilio* sub-district under the name of *Llanboidy* (population 6070).
608	BRECKNOCK	1 December	The sub-district of *Merthyr Cynog* was abolished, and the parishes formerly comprised therein were rearranged as follows:—Llanfihangel Nantbran (population 317), was added to *Devynnock* sub-district, and the parishes of Merthyr Cynog, Garthbrengy, and Llanfihangelfechan (aggregate population 951) were added to *Brecknock* sub-district.
609	CRICKHOWELL	1 January	The sub-district of *Llangattock* was abolished, the part known as Lower Llangattock (population 968) being transferred to *Crickhowell* sub-district, and the remaining part known as Upper Llangattock (population 4,180) to *Llanelly* sub-district.

NOTE.—No change affecting the population of any Registration District or Sub-district was made during 1892 under the provisions of the Divided Parishes and Poor Law Amendment Acts, 1876 and 1879, but a small change was made between the two sub-districts in the district of BLABY under the provisions of the Leicester Extension Act, 1891.

* The *Registration Counties* consist of groups of Registration Districts, which are generally co-extensive with the Poor Law Unions. A District which extends into two or more Geographical Counties is included entirely in that Registration County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties differ therefore more or less from the boundaries of the Geographical Counties. For areas and populations of the Registration Divisions and Counties, *see* pages 64-67.

* The 633 *Registration Districts* (Paddington 1a, North Bierley 497b, and Holyhead 631 having been constituted Registration Districts since the numerical arrangement 1 to 630 was adopted on 1st January 1881) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Registration Sub-districts (2111 in number at the end of the year 1892) are sub-divisions of Registration Districts, within which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of these letters show the number of such Institutions in each Registration sub-district.

† The Deaths in the principal Institutions in England in 1892 are given on pages 71-94.

* 449 : 3 and 450 : 1.—On 1st July 1892 the parishes of Beeston, Burwardsley, Eaton, Rushton, Tarporley, Tilstone Fearnall, Tiverton, and Utkinton were transferred from *Bunbury* sub-district, in the district of NANTWICH, to *Tattenhall* sub-district, in the district of CHESTER. The births and deaths are shown as if the change had taken place at the beginning of the year.

† 450.—The District of CHESTER comprises the three Poor Law Unions of Tarvin (Tattenhall sub-district), Chester (Chester Castle and Chester Cathedral sub-districts), and Hawarden (Hawarden sub-district).

‡ 451 : 2, 3.—On 1st December 1892 the sub-district of Eastham was divided into two sub-districts called (2) Eastham and (3) Bebington. The births and deaths are shown as if the change had taken place at the beginning of the year. For details of the change, *see* Table 57, pp. lxxvii-lxxviii.

DEATHS IN WORKHOUSES, HOSPITALS, AND PUBLIC LUNATIC ASYLUMS.

1892.

THE following Table shows the numbers of deaths (Persons, Males, and Females) registered during 1892 in the Workhouses, Hospitals, and Public Lunatic Asylums of England. These figures afford the means of correcting the mortality of districts and sub-districts in which these Institutions are situated. The Table includes 1871 Institutions; of which 752 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 1025 Hospitals or Infirmaries; and 94 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients (held on that account to be public for the purposes of this Table) are also included. In these 1871 Institutions 66,424 deaths were registered during the year, or 11·9 per cent. of the total deaths in England and Wales, against 11·6 and 11·7 per cent. in the preceding two years; 39,748 occurred in Workhouses, 20,440 in Hospitals, and 6236 in Lunatic Asylums. The proportion to total deaths was 7·1 per cent. in Workhouses, 3·7 in Hospitals, and 1·1 in Lunatic Asylums. The proportion of deaths recorded in Workhouses, which had been 7·0 and 7·1 per cent. in 1890 and 1891, was also 7·1 per cent. in 1892.

Information relating to the deaths recorded in many Private Lunatic Asylums, Private Asylums for Idiots and Imbeciles, and in a few other institutions, will be found in the notes to the following pages.

Deaths in Workhouses, Hospitals, and Public Lunatic Asylums, 1892.

* When a person dies from an operation performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

OF the above 11,510 ACCIDENTS, 129 are stated to have occurred to Men in a state of INTOXICATION, and 22 to Men suffering from DELIRIUM TREMENS. And in 296 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.	ALL AGES.	Total under 1 Year. Infants under 1 Month.	Others.	1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
Intoxication at time of Accident	129	–	–	–	–	–	–	–	–	–	1	4	19	27	36	23	11	3	–
Delirium Tremens ditto	22	–	–	–	–	–	–	–	–	–	–	–	3	7	7	3	2	–	–
Acceleration by Erysipelas	43	–	–	1	–	–	–	1	1	2	1	–	6	5	3	10	6	3	–
Acceleration by Mortification	13	–	1	–	–	–	–	–	–	–	–	–	1	2	3	3	1	2	–
Acceleration by Pyæmia	135	–	3	1	1	2	1	8	13	10	11	2	11	24	18	23	7	6	2
Acceleration by Tetanus*	103	1	–	1	2	4	–	8	14	11	8	5	21	12	10	5	10	1	–

* Cases of tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Death (*see* page 114).

* When a person dies from an operation performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

OF the above 4833 ACCIDENTS, 61 are stated to have occurred to Women in a state of INTOXICATION, but not one to Women suffering from DELIRIUM TREMENS. And in 117 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS.* Here follow the details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.	ALL AGES.	Total under 1 Year.		1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
		Infants under 1 Month.	Others.																
Intoxication at time of Accident	61	–	–	–	–	–	–	–	–	–	1	1	6	15	18	11	7	2	–
Acceleration by Erysipelas	27	–	1	–	–	–	–	1	–	–	–	–	5	2	3	7	7	2	–
Acceleration by Mortification	9	–	–	–	–	–	–	–	–	–	–	–	1	1	1	3	2	1	–
Acceleration by Pyæmia	52	–	–	3	–	3	1	7	4	3	2	1	6	7	5	8	6	3	–
Acceleration by Tetanus*	29	1	–	–	3	3	1	8	4	3	2	–	1	4	3	2	1	–	1

* Cases of Tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Death (*see* page 115).

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881. Since that date three new Registration Districts have been formed, the District of Kensington (1) having been divided into Paddington (1*a*) and Kensington (1*b*), the District of Bradford (497) into Bradford (497*a*) and North Bierley (497*b*), and the District of Anglesey (630) into Anglesey (630) and Holyhead (631).

For names of Towns, such as Bournemouth, Maidenhead, &c., which are not found in this "Index of Registration Districts," see the "Index of Registration Sub-districts" (pp. 208–217) *and "Index of certain Towns"* (pp. 218, 219).

INDEX OF REGISTRATION SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573 2) is the 2d Sub-District of the Wigton District, No. 573.]

Sub-District.	District.	No.
A		
Abbey Holme	Wigton	573; 2
Abbots Bromley	Uttoxeter	366; 2
Abbotsbury	Weymouth	264; 4
Abbots Langley	Watford	137; 4

Illegitimate Births. (*See* Births.)

Imports; Value of, per head of Population, 1860–92. (Table A.) . . vi

Indexes; Additions to in 1892, and aggregate number of Names in . . xviii
Searches in. (Table 26, p. liv.) xviii
to Districts, Sub-Districts, and certain Towns 206–221

Infantile Mortality; continued excess of, in 1892 lx
in Counties (Table 10) xxxv
in England, 1838–92. (Table 18.) xliv
in London, 1842–92. (Table 19.) xlvii

Influenza; Epidemics in 1890, 1891, and 1892, in Urban and Rural Districts x
accompanied by increased fatality of some other diseases especially those of the respiratory organs xv
course of the epidemic, 1890–91–92, in London and two other areas xv
Mortality attributed to, and to diseases of respiratory organs, 1890–91–92, compared with that of 1889 as a standard, and showing excess in Epidemic years. (Table E.) . . . xv
London and southern area suffered greatest mortality from . . xvi
Deaths from Epidemic 1890–91–92, estimated at about 110,000, and reasons for the estimate xvi
(*See* Causes of Death Tables.)

Inquests; in 1892 xviii
in Divisions, Counties, and Districts 160–192

Institutions, Public; Deaths in 71–94

PAGES

INTEMPERANCE; High Mortality directly ascribed to xvii
Annual death-rates, 1868–92. (Table 16) xlii

INTERNATIONAL VITAL STATISTICS. (Tables 39–56, pp. lx–lxxvi.) . . xx
difficulty of comparing, owing to variations of sex and age distribution, and desirability of adopting a "Standard or Life-table Population" for international use xx

INTOXICATION; Accidental Deaths while in a state of 196, 199

IRELAND; Area, Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 1, 39, 43.) . . . . . xxvii, lxv, lxvii

IRISH EMIGRANTS from United Kingdom, 1873–92. (Table 28.) . . . lv

ISLANDS in BRITISH SEAS; Area, Population, Births, and Deaths. (Table 27.) lv

ITALY; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 56.) . . . . . lxv, lxxvi

JERSEY; Area, Population, Births, and Deaths. (Table 27.) . . . lv

JEWS; increase of marriages among vii
increase in proportion of. vii

JEWISH MARRIAGES; increase of vii

LEGITIMATE BIRTHS. (*See* BIRTHS.)

LOCAL DISEASES; Mortality from, lower than in 1890–91. (Table B., p. x.) xvii

LONDON; Mortality from principal Zymotic Diseases, and Infant Mortality, 1842–92. (Table 19.) xlvii
Deaths in, classified according to Sex, Age, and Cause . . 122–135
Deaths in, from several Causes, and Inquests, in 1892 . . 160

LUNATIC ASYLUMS, PUBLIC; Deaths in 71–94

MAN, ISLE OF; Area, Population, Births, and Deaths. (Table 27.) . . lv

MANSLAUGHTER; Deaths ascribed to, in 1892 . . . . . xvii; 204, 205

MARINE REGISTER BOOK; entries of Births and Deaths in, 1892 . . xix

MARRIAGES; number registered in England and Wales, 1892. (Abstracts, pp. 2–67.) v
forms of celebration of. (Tables 5, 6, pp. xxx, xxxi; Abstracts, pp. 64–67.) vii
further decline of Roman Catholic vii
stationary among Dissenting denominations vii
increase of Jewish, indicating increase of Jewish population. . vii
First Marriages and Re-Marriages. (Table 7, p. xxxii; Abstracts, pp. 64–67.) vii
of Divorced Persons vii
Ages at Marriage, proportions stated and not stated . . . vii
increasing tendency to defer marriage vii
of Minors declining. (Tables 7, 8, pp. xxxii, xxxiii; Abstracts, pp. 64–67.) vii
of Minors; comparative prevalence of, in certain counties. (Table 8, p. xxxiii.) vii
(*See also* AGES and SIGNATURE by MARK.)
Buildings registered for Solemnisation of. (Table 9, p. xxxiv) . viii
in United Kingdom and its parts, and in other European States. (Tables 40–56.) . . . . . lxvi–lxxvi

PAGES

MARRIAGES—*continued.*
Aggregate number of Names of Persons married, on Registers, 1843-92. (Table 26.) liv
Conditions and ages of 441,792 of the Persons married . . 68-70

MARRIAGE-RATES; decline of, in 1892. (Tables 2, 3, 4, 8, pp. xxviii, xxix, xxxiii.) v
Counties with the highest and the lowest rates in 1892 . . v
Fluctuations of, compared with commercial fluctuations. (1860-92, Table A.) . . . . . v-vi
in the United Kingdom and its parts, and in other European States. (Tables 39-56.) . . . . . lxv-lxxvi

MEASLES; mortality from, in 1892 xi
Comparison of County distribution of, in recent epidemics . . xi
high minimum death-rates from, found in unbroken populous areas xi
high maximum death-rates due to insanitary conditions . . xi
local incidence somewhat analagous to that of whooping cough . xiv

REPORT

TO

The Right Honourable GEORGE J. SHAW LEFEVRE, M.P., President of the Local Government Board, &c. &c.

(1893.)

SIR,

I HAVE the honour to submit to you the following report on the marriages, births, and deaths registered in England and Wales during the year 1893.

POPULATION.

The population of England and Wales, as enumerated on 6th April 1891, consisted of 29,002,525 persons. The natural increase, by excess of births over deaths, from the beginning of April 1891 to the middle of 1893 amounted to 782,471, and this would raise the population to 29,784,996 at the latter date. Emigration and immigration, however, cannot be disregarded in estimating a population. In the absence of precise information concerning these points, the estimated populations published in the Annual Reports are based on the assumption that the rate of increase which prevailed in the last intercensal period has since been maintained—a method which, as was demonstrated in the 53rd Annual Report (*see* pp. v–vi), is not likely to lead to serious error when so large a population as that of the entire country is dealt with.

Thus estimated, the population in the middle of the year 1893 was 29,731,100, including 14,405,925 males and 15,325,175 females (Table 1). It is on this population that the rates for 1893 in the present report have been calculated.

MARRIAGES.

The number of marriages registered in the year 1893 was 218,689, corresponding to a rate of 14·7 persons married, per 1000 living. After 1886, when the marriage-rate was 14·2, which is the lowest on record, there was a gradual recovery for five years, the rate in 1891 reaching 15·6; in 1892, however, the rate declined to 15·4, and it further fell to 14·7 in 1893. The lowest marriage-rates per 1000 population in registration counties in 1893 were 11·2 in Middlesex, 11·4 in Hertfordshire, 12·2 in Buckinghamshire and in Essex, 12·5 in Oxfordshire and in the North Riding of Yorkshire, 12·6 in Huntingdonshire and in Westmorland, and 12·7 in Surrey; the highest rates were 15·1 in Staffordshire, 15·2 each in Gloucestershire, Warwickshire, and Nottinghamshire, 15·3 in Lancashire, 15·4 in the East Riding of Yorkshire, 15·5 in South Wales, and 17·2 in London. The highest and lowest marriage-rates in 1893 were generally in those counties which had also shown respectively the highest and lowest average rates during the preceding decennium.

The decline in the marriage-rate coincided, as usual, with a fall in the value of British exports, and in the amount per head of population cleared at the Bankers' Clearing House, and also with a fall in the price of wheat; the latter was reduced to 11·5 per cent. below the price in 1889, which, as shown in the following table, had been the lowest on record:

TABLE A.— MARRIAGE-RATE, VALUE of BRITISH EXPORTS and IMPORTS, PRICE of WHEAT, and amount cleared at the London Bankers' Clearing House, 1860-93.*

1893	14·7	5 13 6	10 10 7	17 14 9	26 4	218

* The figures in the marriage-rate column are not strictly comparable with those in columns 2, 3, and 4, inasmuch as the former relate only to England and Wales, whilst the latter relate to the whole of the United Kingdom. The figures relating to exports and imports and to the price of wheat are derived from the Board of Trade Statistical Abstracts; and those showing the amount cleared at the London Bankers' Clearing House (calculated upon the population of England and Wales) are derived from the same source.

Forms of Marriage.—Of the marriages contracted in 1893, 151,309 or 692 per 1000, were celebrated according to the rites of the Established Church, and 67,380, or 308 per 1000, otherwise. In the preceding five years, 1888-92, the mean proportions had been 699 and 301. Compared with the proportions in these five years, the proportions of marriages amongst Roman Catholics declined in 1893 from 42 to 41 per 1000, while those amongst other Christian non-conforming bodies rose slightly, viz., from 117 to 118. The gradual rise in the proportion of Jewish marriages, referred to in recent reports, was continued in 1893, the proportion being 5·1 per 1000, against a mean proportion in the preceding five years of 4·2.

First marriages; Re-marriages.—Of 1000 men married during the year 1893, 886 were bachelors, and 114 were widowers; while of 1000 women who married, 920 were spinsters and 80 were widows. The number of re-marriages, as compared with that of first marriages, had declined almost continuously from 1876 to 1891, in which latter year the proportions both of widowers and of widows who re-married stood at the lowest figures then on record (Table 7). In 1892 the proportions of widowers and widows had both slightly increased; this increase was not, however, maintained in 1893, when the proportion of widowers fell to the same level as in 1891, and that of widows to a still lower level than in that year. The number of persons married in 1893 who were described in the register as having been previously divorced, and who in the above proportions are included among the bachelors and spinsters, was 201, including 93 men and 108 women. This total exceeded that recorded in any of the preceding eight years, in which the numbers varied from 150 to 190. Of the 93 divorced men, 71 married spinsters, 16 married widows, and 6 married divorced women. Of the 108 divorced women, 74 married bachelors, 28 married widowers, and 6 married divorced men.

Ages at Marriage.—In regard to 5028, or 2·3 per cent., of the marriages, the age of one or other of the contracting parties was omitted from the register. Of the remaining 213,661 couples, whose ages were stated, the mean ages were 28·51 years for men and 26·23 years for women. The mean age of bachelors who married was 26·55, of widowers 44·61, of spinsters 25·04, and of widows 40·64 years. The mean age at marriage has been steadily rising ever since 1873, the mean age for each group in 1893 being the highest on record. Further evidence that marriage is now deferred to a somewhat later period of life than formerly is afforded by the decline in the proportion of under-age marriages. In the earlier years of civil registration the proportions of those who married before attaining 21 years of age were less than 50 in 1000 for men, and less than 150 in 1000 for women. The proportions went on increasing steadily, until in 1874 they reached their highest points, viz., 84 in 1000 for men and 227 for women; the proportions then began steadily to decline, and they have continued to do so almost uninterruptedly, the figures in 1893 standing at 56 for men, and 181 for women. (Table 7).

The registration counties which showed the highest proportions of under-age marriages among men in 1893 were Nottinghamshire, Bedfordshire, Leicestershire, Staffordshire, and Northamptonshire, these counties having also shown the highest average proportions in the decennium 1883–92. The counties with the highest proportions of under-age marriages among women in 1893 were Durham, Nottinghamshire, Staffordshire, Monmouthshire, Derbyshire, Leicestershire, the three Ridings of Yorkshire, and Essex, the highest average proportions in the preceding decennium having also occurred in these counties.

Scarcely less agreement between the figures for 1893 and those for the previous decennium was shown by the lowest proportions of under-age marriages; in both periods there were very low proportions of these marriages among men in North Wales, Surrey, Herefordshire, Shropshire,

Rutlandshire, and Westmorland, and among women in North Wales, Herefordshire, Shropshire, and Westmorland. It is plain, therefore, that the comparative frequency of early marriages in different counties is not merely a temporary phenomenon, but is one depending on persistent causes.

Signature in Marriage Register.—The men who signed the marriage register with marks instead of writing their names were in the proportion of 50 in 1000, while the similarly illiterate women were 57 in 1000. In 16 out of 1000 marriages both bridegroom and bride used that form of signature. With the progress of elementary education there has been a continuous diminution in the proportions of both men and women signing with marks; in 1893 the proportions, as compared with those in 1892, showed a reduction of 10·7 per cent. for men and of 13·6 per cent. for women.

Buildings registered for the Solemnization of Marriages.—At the end of the year 1893 there were 15,122 churches or chapels belonging to the Established Church in which marriages could be solemnized, showing an increase of 30 upon the number at the end of the previous year. There were also 11,249 buildings registered for marriage by rites other than those of the Established Church, showing an increase of 251, or 2·3 per cent., upon the number on the register at the end of 1892. (Table 9.)

Certified Places of Worship.—The number of new buildings certified in 1893 for religious worship under the provisions of the Acts 15 & 16 Vict. c. 36. and 18 & 19 Vict. c. 81. was 552, while 101 buildings already certified were removed from the register by cancellation; the number of certified buildings recorded in the register at the end of the year was 28,218. It is more than probable, however, that some of these buildings are no longer used for worship, though the necessary steps have not yet been taken to remove them from the register by cancellation.

Births.

The births registered during the year numbered 914,542, and were in the proportion of 30·8 per 1000 persons living. The mean annual birth-rate had been 31·9 in the ten years 1883–92; compared with this average the rate in 1893 therefore showed a deficiency of 1·1 per 1000.

As predicted in the last Annual Report, there was a further slight recovery in the birth-rate in 1893; the rate for this year being 30·8, against 30·5 in the preceding year. With the exception, however, of the rates in 1890 and 1892, which were 30·2 and 30·5 respectively, the rate in 1893 was the lowest yet recorded.

The registration counties showing the highest birth-rates were again amongst the mining and industrial counties, the rates being 32·3 in Lancashire, 33·3 in Nottinghamshire, 33·7 in Northumberland and in Derbyshire, 35·4 in South Wales, 35·5 in Monmouthshire, 36·0 in Staffordshire and 36·2 in Durham. On the other hand the lowest rates, in no case exceeding 27·0, were in Rutlandshire, Sussex, Surrey, Huntingdonshire, Dorsetshire, Westmorland, Devonshire, and Bedfordshire. (Table 10.)

Sex.—The births of males numbered 465,692, and the births of females 448,850, the former being to the latter in the proportion of 1038 to 1000, against an average proportion of 1037 to 1000 in the previous decennium.

In registration counties the highest proportions of male births to 1000 female births were 1138 in Westmorland, 1089 in Dorsetshire, 1081 in Oxfordshire, 1070 in the East Riding of Yorkshire, 1068 in Sussex, and 1066 in Berkshire; while the lowest proportions were 921 in Rutlandshire, 995 in Gloucestershire, 1008 in Essex, 1009 in Huntingdonshire, 1010 in Monmouthshire, and 1012 in Cumberland.

Illegitimate Births.—The infants registered as born out of wedlock numbered 38,858: they were in the proportion of 42 per 1000 births, and of 1·3 per 1000 persons living, these proportions being identical with the proportions in the previous two years, which are lower than any previously recorded. (Table 2). In registration counties the highest proportions of illegitimate to total births were 64 per 1000 in the North Riding of Yorkshire, 66 in North Wales, 68 in Westmorland, 70 in Cumberland, 73 in Herefordshire, and 74 in Shropshire. The lowest county proportions were 28 in Essex, 29 in Monmouthshire, 32 in Middlesex, 35 in South Wales, and 37 in Warwickshire and in Durham.

DEATHS.

The deaths registered in England and Wales during the year 1893 numbered 569,958, being in the proportion of 19·2 to 1000 persons living. This rate was 0·2 per 1000 higher than the rate in the preceding year, but was identical with the mean annual rate in the ten years 1883–92.

The lowest death-rates in registration counties were 14·7 in Westmorland, 15·0 in Berkshire, in Buckinghamshire, and in Dorsetshire, 15·1 in Rutlandshire, 15·4 in Middlesex, and 15·6 in Surrey, in Oxfordshire, and in Cambridgeshire; while the highest were 20·5 in Durham, 20·7 in the East Riding of Yorkshire and in Staffordshire, 20·8 in London, and 22·4 in Lancashire. (Table 10.)

Sex.—The 569,958 deaths included 291,889 of males and 278,069 of females. The death-rate among males was 20·3, and that among females 18·1, per 1000 living of the corresponding sex. Out of equal numbers living there were 1117 deaths of males to 1000 deaths of females, as compared with an average proportion in the decennium 1883–92 of 1122 to 1000. (Table 2.)

Ages.—On reference to Tables 11 and 12 it will be seen that the death-rates of males in the age-groups under 55 years, and of females in those under 45 years were somewhat higher in 1893 than in the previous year; while at the more advanced ages the mortality of both sexes declined, chiefly on account of the diminished prevalence of influenza in 1893. Compared with the average annual death-rates in the 10 years 1881–90, the rates in 1893, for both males and females, were either the same or lower at age-groups between 5 and 35 years, and above 75 years; while the mortality was higher at the age-groups between 35 and 75 years, and also at the age-group under 5 years. Compared, however, with the low rates which had been reached in 1888 and in 1889, the rates in 1893 showed excess in all the age-groups below 85 years.

Infantile Mortality.—The infantile death-rate, or proportion of deaths of infants under one year of age to registered births, was 159 in a thousand, and higher than in any year since 1870, when the proportion had been 160 in 1000. The exceptionally high rate in 1893 was mainly due to heavy mortality from diarrhœa; for, while the average annual mortality from all causes among infants under one year of age per 1000 births rose from 144 in the ten years 1883–92 to 159 in 1893, the part of this mortality attributed to diarrhœa rose from 13 in the ten years 1883–92 to 22 in 1893. The average mortality of infants from all causes in the four decennia ending with 1890 had been in the proportions of 154, 154, 149, and 142, respectively, to 1000 births. (Table 18.)

Urban and Rural Mortality.—Compared with the mortality in the previous year, the death-rate among the urban population rose in 1893 from 19·5 to 20·2 per 1000, while the rate among the rural population

declined from 18·1 to 17·4 per 1000. The death-rate in the urban population, compared with that in the rural population, was in the proportion of 116 to 100, which exceeded the proportion in each of the previous two years, but was slightly below the average proportion in the decennium 1881–90. The increased excess of the urban over the rural death-rate in 1893, as compared with the rates in 1891 and 1892, was in part due to the high mortality from diarrhœa, a disease affecting town in greater degree than country populations. The rates in 1891 and 1892, however, in the rural districts had been unusually high, doubtless on account of epidemic influenza, thus reducing the difference between the urban and rural rates, so that in 1893 the ratio of urban to rural mortality only reverted to its normal figure. This is especially shown by comparison of the death-rates in the first quarter of each of the years 1892 and 1893, for whereas in that period of the former year the rate in the rural districts had been 25·5 per 1000, and not less than 5·2 per 1000 above the average of the corresponding quarters in the previous decennium, it fell in 1893 to 18·4, or 1·9 per 1000 below the same average.

Registered Causes of Death.

The deaths, when distributed to the several classes by their assigned causes, were equivalent to the rates shown in the following table:—

Table B.—Annual Rate of Mortality, per 1,000,000 Living, from the several Classes of Diseases.

Year.	All Causes.	Zymotic Diseases.	Parasitic Diseases.	Dietetic Diseases.	Constitutional Diseases.	Developmental Diseases.	Local Diseases.	Violence.	Ill-defined and not specified Causes.
1883	19,642	2,651	39	66	3,425	1,641	9,943	679	1,198
1884	19,664	3,116	39	58	3,431	1,586	9,618	656	1,160
1885	19,205	2,531	30	60	3,310	1,614	10,007	634	1,019
1886	19,522	2,679	36	61	3,370	1,638	10,040	634	1,064
1887	19,074	2,702	30	64	3,213	1,578	9,867	652	968
1888	18,112	2,133	25	63	3,166	1,569	9,643	622	891
1889	18,221	2,456	24	67	3,223	1,550	9,394	614	893
1890	19,548	2,541	24	81	3,374	1,611	10,364	653	900
1891	20,217	2,706	23	83	3,339	1,690	10,807	670	899
1892	18,982	2,785	21	79	3,168	1,624	9,801	651	853
Mean 1883–92	19,219	2,630	29	68	3,302	1,610	9,948	647	985
1893	19,170	3,165	20	88	3,210	1,593	9,536	675	883
Deaths 1893	569,958	94,126	577	2,610	95,389	47,359	283,546	20,076	26,275

Zymotic or Specific Febrile Diseases.—The deaths ascribed to this class of disease in the year 1893 numbered 94,126, and were in the proportion of 3165 to a million persons living; which exceeds the proportion in any year of the decennium 1883–92. The mortality directly attributed to influenza, which in the year 1891 had attained its maximum, namely 574 per million, and had fallen to 534 in the following year, further fell to

325 in the year 1893. As compared with the average of the preceding ten years there was in 1893 a decrease in the mortality from measles, scarlet fever, and whooping-cough, whilst there was an increase in that from small-pox and enteric fever, and a very serious increase under the heads of diphtheria and diarrhœa.

It was stated in the last Report that after three years of practical immunity from *small-pox*, the deaths in 1892 had suddenly risen to 431, or 15 per million living. In the year 1893 the deaths from this disease further rose to 1457, and corresponded to a rate of 49 in each million persons living. Of the 1457 persons who died from this disease only 150, or 10·3 per cent., were described as having been vaccinated (against 12·8 per cent. in the preceding year); 253, or 17·4 per cent., were returned as not vaccinated, and with respect to 1054, or 72·3 per cent., no statement as to vaccination appeared in the certificates. In addition to the above, 127 deaths were attributed to chicken-pox, and 59 deaths to "effects of vaccination." Thus the total number of deaths either certainly or possibly caused by variola, and of deaths alleged to have been caused by the means taken to prevent that disease, during the year 1893, was 1643, or 55 per million persons living.

The deaths from *measles* in the year 1893 numbered 11,110, and were equal to a rate of 374 per million persons living. This rate is lower than the rate in either of the preceding four years. It is less by 86 per million than the rate in 1892, and less by 80 per million than the average rate in the ten years 1883–92. There was a marked decline in London, the rate falling from 799 per million in the preceding year, to 384 per million in 1893; and this decline may fairly be regarded as the cause of the decreased rate in the country as a whole during 1893, for the death-rate in the remainder of England and Wales, excluding London, was practically the same in 1893 as it had been in 1892.

The mortality, however, differed widely in various parts of the country, for while it did not reach 100 per million in Huntingdonshire, Bedfordshire, Cambridgeshire, Herefordshire, Rutlandshire, or Nottinghamshire, it was as high as 415 in Buckinghamshire, 418 in the East Riding of Yorkshire, 443 in Hampshire, 456 in South Wales, 484 in the West Riding of Yorkshire, 493 in Cumberland, 638 in Northumberland, 642 in Monmouthshire, 657 in Staffordshire, and 685 in Lancashire.

In a few other counties, viz., Berkshire, Suffolk, Norfolk, Wiltshire, Cornwall, and Somersetshire, the mortality from measles was higher in 1893 than it had been in the previous year; in all these cases, however, the rates in 1893 were below the rate for the whole country.

Scarlet fever.—The deaths from scarlet fever numbered 6982, and were equal to a rate of 235 per million of the population. This rate is higher than the rates both in 1891 and in 1892, which had been 171 and 190 respectively. It is, however, considerably below the mean rate in the ten years ending with 1892, which had been 267.

The year 1893 is the ninth consecutive year in which the deaths from scarlet fever in England and Wales have been fewer than 8000, the average number in the nine years having been 6423, and the average rate 226 per million. The lowest previous rate since 1838 had been 402 per million in the year 1884.

The highest county death-rates from scarlet fever in 1893 were 308 per million in Lancashire, 316 in Monmouthshire, 329 in London, 355 in Nottinghamshire, 356 in Herefordshire, 375 in Leicestershire, 467 in Middlesex, and 521 in Cornwall; of these eight counties, Monmouthshire, London, and Leicestershire had also shown excess in 1892, while the death-rate from scarlet fever in Lancashire had exceeded that for the whole country in every year since 1882.

Of 1596 deaths from scarlet fever which were registered in 1893 in London and in the Metropolitan Asylum Hospitals situated outside London, 921, or 58 per cent., occurred in public Institutions, against 807, or 69 per cent. of the total deaths similarly reckoned, in 1892. The reports of the Metropolitan Asylums Board show that the mortality amongst cases treated in the Hospitals under their control was 6·11 per cent. in 1893, against an average of 8·35 per cent. in the six years 1887–1892.

Enteric (Typhoid) Fever.—In the Registrar-General's 55th Annual Report, attention was directed to the unprecedentedly low enteric fever mortality in the year 1892, when the rate did not exceed 137 per million persons living, which is the lowest rate on record. The prediction hazarded in that report, on the strength of the quarterly returns furnished by the local Registrars, namely, that a very large increase in enteric fever mortality would be found to have occurred in 1893, is confirmed by the figures in the present Report. The deaths from enteric fever in that year numbered 6801, and corresponded to a rate of 229 per million persons living, against a mean rate of 184 in the decennium 1883–92. The rate in 1893 was higher than that in any previous year since 1884, when the mortality amounted to 236 in a million.

The increase in mortality from this disease was general throughout almost the whole of England and Wales; Berkshire, Buckinghamshire, Wiltshire, Devonshire, and Worcestershire being the only counties in which the rate in the year 1893 did not exceed that in 1892. The counties which showed, in 1893, the largest excess, as compared with their respective averages in the preceding 10 years were Rutlandshire, Sussex, Durham, the East Riding of Yorkshire, Dorsetshire, Lincolnshire, Herefordshire, Bedfordshire, Cornwall, Warwickshire, and Cheshire, the great increase in Sussex, which amounted to 282 per cent. of the mean rate, being mainly due to the epidemic at Worthing. The following 10 counties showed the highest rates in 1893:—

South Wales, 252.	*Lancashire, 320.†
West Riding, 264.	North Riding, 326.
*Cheshire, 294.†	Sussex, 443.†
Lincolnshire, 295.†	*East Riding, 487.†
*Nottinghamshire, 317.†	*Durham, 565.†

In addition to the 10 counties named above as showing the highest enteric fever rates in 1893, three other counties, namely, Essex, Staffordshire, and Leicestershire, had rates in excess of the mean rate in England and Wales in that year.

In the last three reports of the Registrar-General, a table has been given showing the rates of enteric-fever mortality from the year 1890 onwards, in a group of 18 registration districts, extending from Morpeth to Middlesbrough and Guisborough, which have suffered severely from enteric fever in recent years. It will be useful to continue that table here.

TABLE C.—MORTALITY from ENTERIC FEVER in a GROUP of 18 REGISTRATION DISTRICTS, 1890–93.

Year.	Deaths.	Rates per Million.
1890	601	395
1891	465	301
1892	285	181
1893	766	480

* Showed also one of the highest county rates in each of the two preceding years.
† Higher than the rate in any of the 10 years 1883–92.

It thus appears that the mortality in this group of districts, which had been rapidly falling during the three years 1890-1-2, showed an abrupt and very serious rise in the year 1893. The rate in each of the 18 districts showed an increase, as will be seen in Table D., but the largest increases were in Darlington, Auckland, Easington, Houghton-le-Spring, Chester-le-Street, and Sunderland.

TABLE D.—MORTALITY from ENTERIC FEVER.

Registration Districts.	Death-rate per Million living.				
	1890.	1891.	1892.	1893.	4 Years 1890-3.

Castle Ward - - -	545	206	161	357	316
Morpeth - - - -	310	258	347	456	344

Diphtheria was the assigned cause of death in 9,466 instances during the year 1893. These deaths were equal to a rate of 318 per million living, a higher rate than in any previous year on record with the exception of 1858 and 1859, in which years the rates had been 339 and 517 respectively. The rate in 1893 was 82 per cent. in excess of the average rate in the ten-year period 1883-92, which had been 175 per million. Taking diphtheria and "croup" together the deaths in 1893 amounted to 11,568, or 389 per million, exceeding the rate in the previous year by 91 per million living.

All the county rates from diphtheria except the rates for Huntingdonshire, Dorsetshire, Nottinghamshire, Northumberland, and North Wales exceed their decennial averages.

In 34 counties the rates were lower than the general rate in England and Wales, the excessive diphtheria mortality being limited to comparatively few counties, especially to London, Surrey, Kent, Sussex, Middlesex, Buckinghamshire, Oxfordshire, Essex, Suffolk, and Wiltshire, which counties, with the exception of the last named, form a continuous area closely corresponding with what has been described in previous Reports as the South-Eastern diphtheritic region. The mortality from diphtheria in the ten counties above enumerated was 612 per million living, while in the

remaining thirty-five counties of England and Wales the mean rate did not exceed 197 per million.*

The deaths from *whooping-cough* numbered 10,176 and corresponded to a rate of 342 in a million living. The rate in 1893 from this disease showed a considerable decline from the rates in the three preceding years, which had been 478, 468, and 455 respectively. It was the lowest rate on record, the nearest approach having been 389 per million in the year 1840.

In each of fourteen counties, mostly agricultural in character, namely, Sussex, Bedfordshire, Suffolk, Norfolk, Wiltshire, Dorsetshire, Devonshire, Herefordshire, Warwickshire, Leicestershire, Rutlandshire, the North Riding of Yorkshire, Cumberland, and North Wales, the rate in 1893 showed an increase upon that in 1892, although in only nine of those counties did the rates in 1893 exceed the respective decennial averages, and in five of them, namely, Sussex, Bedfordshire, Devonshire, Herefordshire, and Rutlandshire, the rates in 1893 were below the rate for the whole country. In the remaining thirty-one counties the rates in 1893 were below their decennial averages; although in six of them, viz., in London, Essex, Derbyshire, Cheshire, Lancashire, and Durham the rates in 1893 exceeded the rate in England and Wales.

Influenza.—Although in most parts of the country there was a great decrease in influenza mortality during 1893 as compared with the three preceding years, nevertheless, in some parts of England and Wales, and notably in the Metropolis, the disease was still fatally prevalent.

The deaths in England and Wales specially referred to influenza during 1893 numbered 9669, as against 4523, 16,686, and 15,737 respectively in the years 1890–1–2.

If for the reasons stated in the last Report we again take the year 1889 as a standard of comparison,† we find the combined mortality from influenza and respiratory diseases to have been as shown in table E.

Continuing the estimate of the probable loss of life due to influenza according to the principle adopted in the last Report, and for the reasons there stated, we find that the excess of mortality, or in other words the loss of life actually due to influenza, in England and Wales, during 1893, was about 15,000, which being added to the 110,000 lives lost in the three previous years, makes an aggregate loss of not fewer than 125,000 lives in the four years 1890–1–2–3. Thus to every 3 deaths directly attributed to influenza in these four years about 5 more deaths really caused by the disease were returned as due to various diseases of the respiratory organs.

---

* Counties with highest Diphtheria death-rates in the year 1893.

London	758 per million.	Wiltshire	429 per million.
Essex	557 „	Suffolk	425 „
Surrey	542 „	Oxford	422 „
Sussex	473 „	Middlesex	413 „
Kent	433 „	Buckingham	367 „

Counties with lowest Diphtheria rates in 1893.

Staffordshire	114 per million.	Northumberland	132 per million.
Nottinghamshire	115 „	Cumberland	133 „
Huntingdonshire	121 „	Worcestershire	134 „
East Riding	130 „	Derbyshire	135 „

† The year 1889 was adopted in the 55th Annual Report, p. xv, as a standard for comparison, both because it may be regarded as a year of approximately normal mortality and because it immediately preceded the first outbreak of influenza.

TABLE E.—MORTALITY per 1000 living, attributed to INFLUENZA and DISEASES of the RESPIRATORY ORGANS, in the 5 Years 1889–93.

	Rates per 1000 in each Year.					Excess in 1890-1-2-3, the rates in 1889 being taken as Standard.				
	1889.	1890.	1891.	1892.	1893.	1890.	1891.	1892.	1893.	Mean of 4 Years.

England and Wales -	3·42	4·39	5·12	4·49	3·93	0·97	1·70	1·07	0·51	1·06

The heaviest incidence of influenza in the course of 1893 was in the Metropolitan area, where the deaths attributed to that disease numbered 1513, and were equal to a rate of 351 per million. Of these 1513 deaths nearly half were registered in the fourth quarter, and not fewer than 546 within the last four weeks of the year. Towards the close of 1893, therefore, it appeared from the figures then available as though London were on the eve of yet another severe recrudescence of this disease. Subsequent returns, however, show that by the end of the sixth week of 1894 the weekly influenza deaths had again fallen to 19 in number.

With regard to the excessive mortality in 1893, attributed to diseases of the respiratory system in London, it is worthy of note, as showing that this excess was not due to its ordinary cause, namely, great or prolonged depression of temperature, that the deaths referred to bronchitis, which is the respiratory disease specially influenced by variations of temperature, were more than 7 per cent. *below* the average, whilst those referred to pneumonia were 35 per cent. *above* the average, of the preceding 10 years. If we compare the mortality in 1893 with that in the year 1889, which immediately preceded the influenza period, it will be seen that, after allowing for increase of population, the mortality from pneumonia showed an excess of 65 per cent., while that from bronchitis showed an excess of less than 10 per cent.

Diarrhœal complaints (diarrhœa, dysentery, and cholera) accounted for 29,721 deaths during the year, these deaths being in the proportion of 999 per million living, against an average proportion of 653 in the ten years 1883–92. The rate from these diseases last year exceeded the decennial average by as much as 53 per cent., and was the highest rate recorded in any year since 1884. Only four times in the past 20 years has the mortality from these diseases exceeded that in 1893. In Oxfordshire, Wiltshire, Dorsetshire, Somersetshire, Herefordshire, and Rutlandshire the rates in 1893 from diarrhœal diseases ranged from 263 to 328 per million living, while they reached 1300 in the West Riding of Yorkshire, 1447 in Leicestershire, 1471 in Durham, 1488 in Warwickshire, 1623 in Lancashire, and 2001 in the East Riding of Yorkshire.

Although in the country generally the excess in the death-rate from diarrhœal diseases was 53 per cent., the rates in London, Berkshire, Oxfordshire, Dorsetshire, and Shropshire, differed but slightly from their

respective averages. The *excess*, however, was more than 100 per cent. in Cornwall, Lincolnshire, Cheshire, and the East and North Ridings of Yorkshire.

Only 4 deaths were referred to *hydrophobia*, showing a further decline from the numbers recorded in either of the four preceding years, which had been 30, 8, 7, and 6 respectively. The deaths were fewer in 1893 than they had been in any year since 1863; the annual average in the 29 years 1864–92 having been 32.

To *puerperal fever* 3023 deaths were referred in 1893, and to other *accidents of childbirth* 2927. These deaths numbered 5950 in the aggregate, and were equal to a mortality of 6·51 to 1000 registered births, a further increase upon the rates in the preceding four years, which had been 4·05, 4·89, 5·24, and 5·78 respectively. The rate in 1893 was higher than that in any previous year since 1876, in which year it had been 5·95 per 1000.

Parasitic Diseases.—The deaths referred to parasitic diseases numbered 577, of which 434 were attributed to thrush, and the remainder to "other parasitic diseases." The deaths from diseases of this class were fewer than in any previous year on record.

Dietetic Diseases.—2610 deaths were returned under this heading in 1893, being equal to a rate of 88 per million of the population, against an average rate of 68 in the preceding decennium. The deaths directly ascribed to intemperance numbered 2174, or 73 per million, which is the highest rate on record; the rates in the three preceding years had been respectively 70, 71, and 67 per million. (Table 16.)

Constitutional Diseases.—95,389 deaths, or 3210 in each million persons living, were referred to one or other of the diseases in this category. The deaths from cancer numbered 21,135, and corresponded to an annual rate of 711 in a million. For many years prior to 1892 there had been a progressive increase in cancer mortality. In 1892, however, the rate showed a trifling decline, namely, from 692 to 690; but in 1893 the rate rose again to 711 in a million, and was higher than in any previous year on record. The deaths from phthisis were 43,632, and were equal to a rate of 1468 in a million, which is identical with the rate in the preceding year. Up to the year 1888 the mortality from phthisis had shown a steady decline for many years, but in 1889, 1890, and 1891 it rose somewhat. In 1892 and 1893, however, the rate again fell to 1468 in a million, which is the lowest rate on record. Diabetes was returned as the cause of 2082 deaths, which corresponded to a rate of 70 in a million, and showed a further increase on the rates in recent years.

Developmental Diseases accounted in the aggregate for 47,359 deaths, or 1593 in a million persons living. The deaths referred to "old age" numbered 26,528, or 892 in a million, against 1011 and 944 respectively in the previous two years. As was mentioned in the last Report the mortality from premature birth and congenital defects has shown in recent years a constant tendency to increase. The mortality in 1893 from premature birth was equal to 18·88, and that from congenital defects to 3·90 per 1000 children born, showing a still further increase on the high rates prevailing in recent years, as shown in the following Table.

TABLE F.—PREMATURE BIRTHS and CONGENITAL DEFECTS. DEATHS to 1000 BIRTHS, 1861–93.

Year.	Premature Births.	Congenital Defects.
1861–65	11·19	1·76
1866–70	11·50	1·84
1871–75	12·60	1·85
1876–80	13·38	2·39
1881	13·63	3·20
1882	13·99	3·31
1883	14·45	3·08
1884	14·42	3·15
1885	14·43	3·41
1886	15·09	3·33
1887	15·89	3·29
1888	15·98	3·45
1889	16·30	3·41
1890	17·48	3·46
1891	18·00	3·60
1892	18·46	3·83
1893	18·88	3·90

Local Diseases.—To this class 283,546, or 49·7 per cent. of the total deaths were assigned in the year 1893. These deaths were equal to a rate of 9536 in a million living, which showed a further decline from the exceptionally high rates in 1890 and 1891. The rate was also below the average in the preceding ten years. (Table B.) The deaths from diseases of the respiratory system (exclusive of croup), numbered 105,145, and were in the proportion of 3536 in each million living, as compared with 3,731, the average rate in the decennium 1883–92. Diseases of the nervous system, exclusive of convulsions, were responsible for 47,903 deaths, corresponding to a rate of 1612 in a million, which is the lowest rate recorded in any year since 1868. To diseases of the circulatory system, 48,458 deaths, or 1630 in each million living, were attributed. This rate is lower than that in any previous year since 1885, and 23 in a million below the mean rate in the ten years 1883–92. The deaths from diseases of the urinary system amounted to 13,420 or 451 per million living, being almost identical with the mean rate in the decennium 1883–92, which had been 449 in a million.

Violence.—The deaths referred in 1893 to accident or negligence numbered 17,124, and were equal to a rate of 576 per million of the population, or somewhat above the average in the previous decennium, which had been 555. The deaths ascribed to suicide were 2,599, being in the proportion of 87 per million, against 85 and 88 per million in the preceding two years. Under the heading homicide were classed 337 deaths, the rate of mortality being 11 per million. In 195 of these cases the verdict was murder, and in 142 cases manslaughter, the latter including two cases of justifiable homicide. There were 16 executions in the course of the year.

Ill-defined and Unspecified Causes.—In 26,275 cases, or 4·6 per cent. of the total deaths, the cause of death was so unsatisfactorily stated as to be useless for purposes of scientific classification—the deaths are therefore referred to this heading. The average proportion in the ten years 1883–92 had been 5·1 per cent. The reduction in the proportion of these un-

satisfactory returns was probably in great measure due to the issue from this Office in recent years of a large number of letters of inquiry addressed to medical men concerning doubtful or obscure certificates of the cause of death. The number of such letters in 1893 was 4452, the result being the transference of a large number of deaths from indefinite to definite headings; for example, 541 deaths were removed from more or less vague headings to cancer (or malignant disease), 105 to syphilis, and 219 to puerperal fever and other accidents of childbirth.

Certification of Causes of Death.—Of the 569,958 deaths registered during the year 1893, the causes of 522,783, or 91·7 per cent., were certified by registered medical practitioners, and the causes of 32,839, or 5·8 per cent., by coroners after inquest, while the causes of the remaining 14,336 deaths, or 2·5 per cent., were not certified. The 14,336 uncertified cases included deaths of infants who had been attended only by midwives, and those of persons attended by unregistered practitioners, as well as those of persons who had received no medical attendance of any kind in their last illness. In registration counties the proportions per cent. of uncertified deaths ranged from 0·7 in Middlesex, 0·9 in London, and 1·0 in Wiltshire, to 4·2 in Warwickshire, 4·6 in Huntingdonshire, 5·5 in North Wales, 5·6 in Herefordshire, and 5·7 in Westmorland. Among counties in which the proportion of uncertified deaths was greater in 1893 than it had been in 1892 were Sussex, Buckinghamshire, Leicestershire, and Westmorland; while considerable decrease was shown in Somersetshire, Nottinghamshire, Derbyshire, and Yorkshire.

Offences against the Registration Acts.—In 1893, 23 persons, on prosecution by order of the Registrar-General, were convicted of different offences against the Registration Acts, as under :—

For giving false information for registration	17
For making and giving false certificates of cause of death	3
For burying as still-born a child born alive	1
For giving a false declaration of still-birth	1
For otherwise procuring illegal burial	1
	23

Progress of Registration.

The names in the alphabetical indexes of births, deaths, and marriages recorded in the national registers of England and Wales were increased in the year 1893 by 1,921,878, this addition raising the aggregate number of names in the indexes, which at the end of 1893 embraced a period of 56½ years, to 87,053,427. The number of searches during 1893 in the various registers was 50,626, being 316 fewer than the number in the previous year. The number of certificates issued was 34,117, showing a decrease of 561 from the number in 1892. The fees received for searches and certificates in 1893, and paid into Her Majesty's Exchequer, amounted to 6,845*l.* 6*s.* 6*d.*, or 76*l.* 8*s.* 6*d.* less than in the previous year. (Table 26.)

A list of the various public registers and records lodged in the General Register Office, Somerset House, was published in the 34th Annual Report, pages xxi–xxii.

Mortality in the Army.*

The average strength of the Army at home and abroad in 1893 was 217,279, and the deaths were 1803, the rate of mortality thus being 8·3 per 1000, against 8·9 and 9·1 in the preceding two years. The mortality in the Army abroad was 10·9 per 1000, which was 1·6 per 1000 below the mean rate in the three years 1890–92; while that in the Army at home was 5·5 per 1000, against 5·4 and 4·7 in the preceding two years. (Table 29.)

Mortality in the Navy.†

The average force afloat in 1893 was 60,120. The deaths were 679, being in the proportion of 11·29 per 1000 of the strength. Of the 679 deaths, 245 were due to disease, and 434 to violence; the death-rate from disease was therefore 4·07 per 1000, and that from violence 7·21 per 1000. Of the 434 deaths from violence 392 resulted from drowning, (including 358 by the sinking of the "Victoria") 2 from heatstroke, 35 from other accidental causes, and 5 from suicide.

Births and Deaths of British Subjects at Sea.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of ships trading to or from British ports are required, under penalty, to transmit returns of all births and deaths occurring on board their ships to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of England, Scotland, and Ireland. Similar returns are furnished by persons having charge of Her Majesty's Ships directly to the Registrars-General of Births and Deaths. These returns of births and deaths at sea constitute the "Marine Register Book." The entries of births and deaths of persons other than those stated to be of Scotch or Irish origin, reported to this Office, numbered respectively 189 and 3288 in the year 1893. Of the 3288 deaths, so far as could be judged by the entries, which are not always very precise, 1234 were of persons of English origin, while 139 others were of persons described simply as of British origin.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of masters and seamen afloat during the year 1893 in vessels belonging to the mercantile marine of the United Kingdom (including the islands in the British seas), and registered under the Merchant Shipping Acts, was 240,974, being 761 fewer than in the preceding year. The reported deaths numbered 3172, showing a rate of 13·1 per 1000 of the strength. This rate was 0·7 per 1000 below the mean rate in the five years 1888–92, and was identical with the rate in 1889, which had been the lowest rate on record. (Table 31.)

Among *passengers* on board merchant vessels at sea 78 births and 420 deaths were reported in 1893, the births exceeding by one, and the deaths exceeding by eight, the numbers recorded in the preceding year. (Table 32.)

International Vital Statistics.

In Tables 39–56 will be found international statistics concerning the marriages, births, and deaths, in most of the European States.

---

* Based upon returns furnished by His Royal Highness the Commander-in-Chief.

† Based upon returns furnished by the Director-General of the Medical Department of the Navy.

A comparison of the death-rate in 1893, in each country from which a return was received, with the death-rates in preceding years shows that the mortality was generally somewhat below that of recent years, particularly in Hungary, in the Netherlands, in Belgium, and in Italy; but Switzerland and the German Empire experienced a slightly increased mortality.

In previous reports it has been pointed out that as the sex and age distribution of the population varies greatly in different countries, and as the rates largely depend on such distribution, the rates in one country cannot safely be compared with the rates in another, without correction for this difference in the constitution of the several populations.

In order to allow of fair comparison, it is most desirable that the several countries should agree upon some "Standard population," that is to say, a population with fixed age and sex distribution, for international use; so that the birth, marriage, and death rates for each country may be calculated by this standard. I again commend this suggestion to the notice of the respective Governments.

I have the honour to be,
Sir,
Your faithful Servant,
BRYDGES P. HENNIKER,
Registrar-General.

General Register Office, Somerset House,
5th December, 1894.

Remarks on the Meteorology of the Year 1893.*

By James Glaisher, Esq., F.R.S., &c.

The following remarks, both with regard to atmospheric pressure and temperature, are based on observations made near London, but they may be taken as having a general application.

Atmospheric Pressure.—The readings of the barometer were above their averages till February 7th, being as much as 0·53 in. above on January 19th, the mean daily excess for the 38 days being 0·13 in.; from February 8th to March 2nd it was below, being particularly so on the 21st, 22nd, and 26th of February, when it was as much as 1·29 in., 0·98 in., and 0·99 in. respectively below, and on several other days it was as much as three-quarters of an inch below its average, the mean daily deficiency for the 23 days ending March 2nd being 0·44 in.; from March 3rd to the 11th it was above, the mean daily excess being 0·14 in.; from March 12th to the 17th it was below, the mean daily deficiency being 0·26 in.; from March 18th to May 14th it was generally above, the mean daily excess being 0·23 in.; from May 15th to the 24th it was below, the mean daily deficiency being 0·16 in.; from May 25th to June 18th it was above its average, the mean daily excess being 0·16 in.; from June 19th to August 5th it was generally below, being as much as 0·70 in. below on June 23rd, the mean daily deficiency for the 48 days ending August 5th being 0·14 in.; from August 6th to the 17th it was above, the mean daily excess being 0·13 in.; from August 18th to the 23rd it was below, the mean daily deficiency being 0·18 in.; from August 24th to September 5th it was above, the mean daily excess being 0·09 in.; from September 6th to the 10th it was below, the mean daily deficiency being 0·27 in.; from September 11th to the 15th it was above, the mean daily excess being 0·11 in.; from September 16th to October 9th it was generally below, the mean daily deficiency for the 24 days being 0·31 in.; from October 10th to November 13th it was generally above, the mean daily excess being 0·17 in.; from November 14th to the 19th it was below, being particularly so on the 17th and 18th when it was as much as 0·79 in. and 0·70 in. respectively below, the mean daily deficiency for the 6 days being 0·36 in.; from November 20th to December 6th it was above, the mean daily excess being 0·24 in.; from December 7th to the 14th it was below, being particularly so on the 13th, when it was as much as 0·80 in. below, and on several other days it was as much as half an inch below its average, the mean daily deficiency for the 8 days being 0·45 in.; from December 15th to the 18th it was above, the mean daily excess being 0·34 in.; from December 19th to the 22nd it was below, being as much as 1·15 in. below its average on the 20th, the mean daily deficiency being 0·52 in.; and from December 23rd to the 31st it was above its average, being more than half an inch in excess on two or three days, the mean daily excess for the 9 days ending December 31st being 0·38 in.

The highest reading of the barometer at the height of 159 feet above the sea was 30·536 ins. on December 29th; and the lowest was 28·561 ins. on February 21st. The yearly range was 1·975 in.

Temperature.—The temperature of the air was below its average till January 18th, being particularly so on the 2nd, 3rd, 4th, and 5th, the mean daily deficiency for these 4 days being 14°·4; the mean daily deficiency for the 18 days ending January 18th was 6°·7; from January 19th to February 21st it was generally above its average, being particularly

* For Meteorological Tables, see pp. lx–lxv.

so on the 31st of January and 19th of February, when it was as much as 10°·6 and 11°·6 respectively above, the mean daily excess for the 34 days being 3°·5; from February 22nd to the 28th it was cold and below its average, the mean daily deficiency being 3°·9; from March 1st to the 16th it was above, the mean daily excess being 5°·3; from March 17th to the 21st it was below, the mean daily deficiency being 4°·3; from March 22nd to May 27th it was generally above, being particularly so on the 19th, 20th, and 21st of April and on the 13th of May, when it was as much as 10°·3, 10°·8, 11°·0, and 10°·9 respectively above, and on several other days in this period it was as much as 8° and 9° above its average, the mean daily excess for the 69 days ending May 29th being 3°·7; from May 30th to June 3rd it was below, the mean daily deficiency being 3°·9; from June 4th to the 19th it was above, being particularly so from June 15th to the 19th, the mean daily excess for the 4 days being 10°·3; the mean daily excess for the 16 days ending June 19th was 4°·5; from June 20th to the 26th it was below, the mean daily deficiency being 3°·1; from June 27th to July 11th it was above, being as much as 11°·9 in excess of the average on July 8th, the mean daily excess being 4°·2; from July 12th to August 7th it was generally below, the mean daily deficiency being 2°·1; from August 8th to the 22nd it was above its average, being particularly so from the 15th to the 18th, the mean daily excess for these 4 days being 13°·1; and the mean daily excess for the 15 days ending August 22nd was 8°·4; from August 23rd to the 29th it was below, the mean daily deficiency being 2°·8; from August 30th to September 8th it was above, the mean daily excess being 2°·5; from September 9th to the 13th it was below, the mean daily deficiency being 3°·2; from September 14th to the 20th it was above, the mean daily excess being 2°·6; from September 21st to the 26th it was below, the mean daily deficiency being 6°·0; from September 27th to October 29th it was generally above its average, being as much as 10°·6 and 10°·3 above on October 15th and 16th respectively; the mean daily excess for the 33 days ending October 29th was 2°·0; from October 30th to November 27th it was below, the mean daily deficiency being 3°·2; from November 28th to the 30th it was above, the mean daily excess being 7°·3; from December 1st to the 5th it was below, being particularly so on the 2nd and 3rd of December, when it was as much as 11°·4 and 10°·4 respectively below its average, the mean daily deficiency being 5°·7; from December 6th to the 28th it was above, the mean daily excess being 3°·2; and from December 29th to the end of the year it was below its average, being as much as 10°·3 below on the 31st, the mean daily deficiency being 5°·5.

The highest temperatures of the air were at the Royal Observatory 80°·5, and at Barnet and Cambridge 80°·1; and the lowest were at Salisbury 19°·8, at Barnet 19°·9, and at Carlisle 21°·9.

Rainfall.—The fall of rain was below its average in January, above in February, and below its average again in March; the total fall in the three months at Greenwich was 4·60 ins., or 0·35 in. below the average. The fall of rain was below its average in each of the months of April, May, and June; the total fall in the three months at Greenwich was 1·47 in., or 4·31 ins. below the average. The fall of rain was above its average in July, and below in both August and September. The total fall in the three months at Greenwich was 5·87 ins. or 1·44 in. below the average. The fall of rain was above its average in October, below in November, and above its average again in December; the total fall in the three months at Greenwich was 8·19 ins. or 1·12 in. above the average.

The heaviest falls of rain at our stations were at Stonyhurst 50·56 ins., at Bath 35·17 ins., and at Barnstaple 32·02 ins.

The least falls were at Somerleyton 17·15 ins., at Lowestoft 17·47 ins., and at Tottenham 18·57 ins.

The greatest number of days of rain were at Stonyhurst 212, at Carlisle 189, and at Guernsey 184.

The smallest number of rainy days were at Barnet 125, and at Tottenham and Oxford 135.

Thunderstorms occurred on 61 days at the different stations during the year; of these 12 were in July, 9 in June, 8 in each of the months of May, August, and October, 7 in September, 3 in both April and December, 2 in February, one in November, and none were reported in either January or March.

Thunder was heard but lightning was not seen on 59 days during the year; of these 12 were in both June and July, 9 in May, 8 in August, 6 in both September and October, 3 in December, 2 in April, and one in February.

Lightning was seen but thunder was not heard on 53 days during the year; of these 12 were in October, 9 in August, 6 in both July and September, 5 in both May and December, 4 in June, 2 in both February and April, and one in both January and March.

Solar halos were seen on 80 days during the year; of these 13 were in May, 11 in March, 10 in April, 8 in September, 7 in February, 6 in both January and August, 5 in both July and October, 4 in June, 3 in December, and 2 in November.

Lunar halos were seen on 34 days during the year; of these 11 were in March, 4 in both January and September, 3 in each of the months of February, April, and October, and 2 in each of the months of May, August, and December.

Snow fell on 60 days during the year; of these 18 were in January, 11 in each of the months of February, November, and December; 4 in March; 2 in both September and October; and one in April. The last fall in the spring was on April 17th at Halifax; none fell in May, June, July, or August; and the first fall in the autumn was on September 22nd at Halifax.

Hail fell on 73 days during the year; of these 13 were in February, 11 in November, 9 in December, 8 in both January and October, 6 in August, 4 in each of the months of March, June, and September, 3 in May, 2 in April, and one in July.

Fog prevailed on 126 days during the year; of these 20 were in January, 19 in March, 13 in both October and December, 11 in both April and November, 9 in both February and August, 8 in both June and September, and 5 in May.

PRELIMINARY TABLES.

TABLE 1.—**United Kingdom: Population** of its several **portions estimated** to the the **British Seas,** and of the **portions** of the **Army,**

YEAR.	UNITED KINGDOM. AREA 77,483,866 ACRES.			ENGLAND AND WALES. AREA 37,317,885 ACRES.		
	Persons.	Males.	Females.	Persons.	Males.	Females.
1844	27,525,119	13,456,832	14,068,287	16,535,174	8,093,100	8,442,074

* Deaths from this cause prior to 1881 were classed, partly with "Diseases of Respiratory System" and partly with "Ill-defined and not specified Causes."
† Deaths from these diseases prior to 1881 were classed with "Other Tubercular and Scrofulous Diseases."

TABLE 16.—ENGLAND.—**Annual Death-rates,** from **Various Causes,** to a **Million Persons living, 1869-93.**

(Decimals are omitted, the nearest whole number being taken. When the Deaths from any Cause were too few to give a rate of 0·5, a cipher is inserted.)

* For the purposes of this table LONDON includes, for recent years, the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, and the Metropolitan Hospitals and Asylums situated outside Registration London. Some of the figures for 1893 may differ, therefore, from those in Tables 10, 20, and 23.

TABLE 20.—ENGLAND.—Death-rates from several Causes in Registration Counties, 1893.

REGISTRATION COUNTY.	Estimated Population in the middle of 1893.*	DEATH-RATE PER MILLION PERSONS LIVING FROM																							
		All Causes.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Typhus.	Enteric Fever.	Simple and Ill-defined Fever.	Diarrhœa and Dysentery.	Cholera.	Cancer.	Tabes Mesenterica.	Phthisis.	Other Tubercular and Scrofulous Diseases.	Diseases of Nervous System.	Diseases of Circulatory System.	Diseases of Respiratory System.	Diseases of Digestive System.	Diseases of Urinary System.	Diseases of Organs of Generation.	Puerperal Fever.	Childbirth.	Violence.	Other Causes.

NOTE.—*Up to and including* 1886 masters were excluded from the above employment and mortality figures; the latter of which contained some cases of men who died in colonial vessels and fishing vessels not registered under the Merchant Shipping Acts, whose crews are not included in the employment column.
Since 1886 masters are included in both columns, and the employment and mortality figures relate only to persons employed in vessels registered under the Merchant Shipping Acts belonging to the United Kingdom, the Isle of Man, and Channel Islands. Deaths occurring in the United Kingdom after the seamen have been discharged from their ships, and on vessels employed exclusively in rivers and inland navigation, and on yachts, are not included.

TABLE 32.—MERCHANT SERVICE. **Births** and **Deaths** at **Sea** among **Passengers (British Subjects), 1857–93.**

* The prices of Consols for the years 1844–52 relate to the 12 months beginning 1st April; from 1853 onwards the prices relate to calendar years. For the years 1844–88 the prices relate to stock bearing 3 per cent. interest, for 1889–93 to stock bearing 2¾ per cent.

† From the Board of Trade Statistical Abstract.

‡ The Registrar-General is unable to give precise information as to the price of meat for the years 1889–93.

§ The prices of coal are furnished by the Mineral Statistics Department of the Home Office.

‖ Derived from Returns, published by the Local Government Board, of the number of persons in receipt of Relief on the last day of each week.

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating thereto are included in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census year.

† Cholera was epidemic in the year 1853, and war raged in the year 1864.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census year. † Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

1893	—	—	—	—	—	—	—	—

NOTE.—Statistics for the 7 years 1871-77 were not issued owing to the disturbed state of the country. The decline in registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred in that year.

* Census year.

NOTE.—The numbers for Rome were first included with those for the Kingdom of Italy in 1872. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for the end of each of the other years the population is estimated on the assumption that the rate of increase which prevailed in the last inter-censal period has since been maintained.

* Census year

TABLE 57.—ENGLAND. Changes in the Constitution of Registration Districts and Sub-districts during the Year 1893.

N.B.—(1.) The Name of the DISTRICT is in SMALL CAPITALS, that of the *Sub-district* in *Italics*.
(2.) The Populations quoted are the revised Numbers enumerated at the Census of 1891.

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
		1893.	
6	MARYLEBONE	1 September	The sub-districts of *All Souls* and *Cavendish Square* were united under the name of *All Souls* (population 37,713).
13	HOLBORN	1 June	The sub-districts of *St. Andrew Eastern* and *Saffron Hill* were united under the name of *St. Andrew Eastern* (population 15,343).
41	BROMLEY	1 August	The sub-districts of *Bromley* and *Chislehurst* were re-arranged into three sub-districts, viz.:—1. *Bromley* sub-district, consisting of the parishes of Bromley, Hayes, Keston, and Downe (aggregate population 23,815); 2. *Beckenham* sub-district, consisting of the parishes of Beckenham and West Wickham (aggregate population 21,969); and 3. *Chislehurst* sub-district, consisting of the parishes of Cudham, Knockholt, Chelsfield, Farnborough, Orpington, St. Mary Cray, St. Paul's Cray, Chislehurst, Mottingham, Foots Cray, and North Cray (aggregate population 23,469).
88	PORTSEA ISLAND	1 June	Part of the sub-district of *Landport*, viz.: the part of the parish of Portsea situated south of King's Road and Elm Grove including the south sides of those roads, and west of Victoria, Chester and Lennox Roads including the west sides of those roads in a straight line to the east end of Southsea Castle (population 10,657) was added to *Portsmouth Town* sub-district which was re-named *Portsmouth and Southsea* sub-district.
93 94	CHRISTCHURCH RINGWOOD	1 January	Part of the parish of Christchurch (population 91) in the sub-district of *Christchurch* was transferred to the parish of Ringwood in the sub-district of *Ringwood*.
166	OUNDLE	1 July	The sub-districts of *Oundle* and *Fotheringhay* were united under the name of *Oundle* (population 10,938).
225	NORWICH	1 January	The sub-districts of *Mancroft* and *West Wymer* were united under the name of *West Wymer* (population 53,034).
266	SHERBORNE	1 October	The sub-districts of *Sherborne* and *Bradford Abbas* were united under the name of *Sherborne* (population 8,517).
309	CHARD	1 September	The parish of Knowle St. Giles (population 92) was transferred from the sub-district of *Combe St. Nicholas* to that of *Ilminster*.
310	YEOVIL	1 January	The parishes comprised within the Registration District of YEOVIL were re-arranged into four sub-districts, viz.:—1. *Coker* sub-district, consisting of the parishes of Haselbury Plucknett, North Perrott, Hardington Mandeville, Pendomer, Sutton Bingham, Closworth, Barwick, East Coker, West Coker, Odcombe, East Chinnock, West Chinnock, and Brimpton (aggregate population 5,416); 2. *South Petherton* sub-district, consisting of the parishes of Chiselborough, Norton-under-Hamdon, and South Petherton (aggregate population 3,050); 3. *Martock* sub-district, consisting of the parishes of Martock, Tintinhull, Stoke-under-Hamdon, Montacute, Thorne, and Lufton (aggregate population 5,988); and 4. *Yeovil* sub-district, consisting of the parishes of Chilthorne Domer, Ilchester, Sock Dennis, Northover, Yeovilton, Limington, Ashington, Chilton Cantelo, Pudymore Milton, West Camel, Preston Plucknett, Yeovil, and Mudford (aggregate population 13,448).

Table **57** (*continued*).—ENGLAND. Changes in the Constitution of Registration Districts and Sub-districts during the Year 1893.

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
		1893.	
325	WESTBURY-ON-SEVERN	1 July	The parishes comprised within the two sub-districts of the Registration District of WESTBURY-ON-SEVERN were re-arranged and called 1. *Newnham* and 2. *East Dean:* the former consisting of the parishes of Blaisdon, Westbury-on-Severn, Minsterworth, Churcham, Bulley, Huntley, Longhope, Awre, Newnham, and Flaxley (aggregate population 7,245); and the latter consisting of the parishes of East Dean, Little Dean, Abinghall, and Mitcheldean (aggregate population 16,426).
329 330	STROUD TETBURY	1 October	The parish of Avening (population 894) was transferred from *Horsley* sub-district in the district of STROUD to *Tetbury* sub-district in the district of TETBURY.
364 448	LEEK CONGLETON	1 October	The parish of Biddulph (population 5290) was transferred to *Congleton* sub-district from *Norton* sub-district in the district of LEEK.
386	BIRMINGHAM	1 January	The sub-districts of *St. Thomas* and *St. Martin* were united under the name of *St. Martin* (population 72,237).
424 425	CAISTOR GLANFORD BRIGG	1 January	Part of the parish of Bigby (population 135), in the sub-district of *Caistor* was transferred to the parish of Glanford Brigg in the sub-district of *Brigg*.
447	NORTHWICH	1 February	The parishes of Shurlach, Birches, and Hulse (population 221) were transferred from the sub-district of *Northwich* to that of *Middlewich;* the parish of Wallerscoat (population 10) was transferred from the sub-district of *Weaverham* to that of *Northwich;* and the parish of Occlestone (population 96) was transferred from the sub-district of *Middlewich* to that of *Over*.
448 364	CONGLETON LEEK	1 October	The parish of Biddulph (population 5,290) was transferred from the sub-district of *Congleton* to the sub-district of *Norton* in the district of LEEK.
453	LIVERPOOL	1 September	The sub-districts of *Howard Street* and *Islington* were united under the name of *Islington* (population 34,807).
491	WHARFEDALE	1 September	The townships of Denton, Ilkley, Middleton, and Nesfield-with-Langbar (population 6,240) were separated from the sub-district of *Otley* and constituted a new sub-district called *Ilkley*.
579	KENDAL	1 April	The townships of Preston Patrick and Preston Richard from Kirkby Lonsdale sub-district and the township of Stainton from *Milnthorpe* sub-district (aggregate population 1,905) wese transferred to *Grayrigg* sub-district; and the townships of Burton in Kendal, Farleton, Holme, and Dalton (aggregate population 1,729) were transferred from *Kirkby Lonsdale* sub-district to *Milnthorpe* sub-district.
601	CARDIGAN	1 March	The parishes of Llangoedmore, Verwick, and Mount (aggregate population 1,206) were transferred from the sub-district of *Cardigan* to that of *Llandygwydd;* and the parishes of Manordivey, and Llanfihangel-Penbedw (aggregate population 1,011) were transferred from the sub-district of *Llandygwydd* to that of *Cardigan*.
611	KNIGHTON	1 January	That part of the parish of Llanfihangel Beguildy in *Llanbister* sub-district (population 549) was transferred to *Knighton* sub-district.

NOTE.—No change affecting the population of any Registration District or Sub-district was made during 1893 under the provisions of the Divided Parishes and Poor Law Amendment Acts, 1876 and 1879.

* The *Registration Counties* consist of groups of Registration Districts, which are generally co-extensive with the Poor Law Unions. A District which extends into two or more Geographical Counties is included entirely in that Registration County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties differ therefore more or less from the boundaries of the Geographical Counties. For areas and populations of the Registration Divisions and Counties, *see* pages 64-67.

* The 633 *Registration Districts* (Paddington 1a, North Bierley 497b, and Holyhead 631 having been constituted Registration Districts since the numerical arrangement 1 to 630 was adopted on 1st January 1881) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Registration Sub-districts (2107 in number at the end of the year 1893) are sub-divisions of Registration Districts, within which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union: *w* indicates a Workhouse Establishment receiving inmates from other Districts than the one in which it stands; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of these letters show the number of such Institutions in each Registration sub-district.

† The Deaths in the principal Institutions in England in 1893 are given on pages 71-94.

‡ 6: 1.—On 1st September 1833 the sub-districts of *Cavendish Square* and *All Souls* were united for registration purposes and called *All Souls*.

* 88: 3, 4.—On 1st June 1893 part of the sub-district of *Landport* was added to *Portsmouth Town*, which was re-named *Portsmouth and Southsea* sub-district. As the births and deaths in the revised areas from the beginning of the year could not be ascertained, the figures for the two sub districts taken together are shown in the Table.

† 93:1 and 94:1.—On 1st January 1893 part of the parish of Christchurch was transferred from the sub district of *Christchurch* to that of *Ringwood*.

* 448: 2.—On 1st October 1893 the parish of Biddulph was transferred from the sub-district of *Congleton* to the sub-district of *Norton* in the district of LEEK (364: 1). The Births and Deaths are shown as if the change had taken place at the beginning of the year.

† 450.—The District of CHESTER comprises the three Poor Law Unions of Tarvin (Tattenhall sub-district), Chester (Chester Castle and Chester Cathedral sub-districts), and Hawarden (Hawarden sub-district).

‡ 453: 6.—On 1st September 1893 the sub districts of *Howard Street* and *Islington* were united for registration purposes and called *Islington*.

DEATHS IN WORKHOUSES, HOSPITALS, AND PUBLIC LUNATIC ASYLUMS.

1893.

THE following Table shows the numbers of deaths (Persons, Males, and Females) registered during 1893 in the Workhouses, Hospitals, and Public Lunatic Asylums of England. These figures afford the means of correcting the mortality of districts and sub-districts in which these Institutions are situated. The Table includes 1950 Institutions; of which 754 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 1102 Hospitals or Infirmaries; and 94 Lunatic Asylums. The Lunatic Asylums are mostly County and Borough Asylums, but a few private Asylums which receive pauper patients (held on that account to be public for the purposes of this Table) are also included. In these 1950 Institutions 70,463 deaths were registered during the year, or 12·4 per cent. of the total deaths in England and Wales, against 11·7 and 11·9 per cent. in the preceding two years; 40,577 occurred in Workhouses, 23,457 in Hospitals, and 6429 in Lunatic Asylums. The proportion to total deaths was 7·12 per cent. in Workhouses, 4·12 in Hospitals, and 1·13 in Lunatic Asylums. The proportion of deaths recorded in Workhouses, which had been 7·17 and 7·10 per cent. in 1891 and 1892, was 7·12 per cent. in 1893.

Information relating to the deaths recorded in many Private Lunatic Asylums, Private Asylums for Idiots and Imbeciles, and in a few other institutions, will be found in the notes to the following pages.

Deaths in Workhouses, Hospitals, and Public Lunatic Asylums, 1893.

* When a person dies from an operation performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

OF the above 12083 ACCIDENTS, 132 are stated to have occurred to Men in a state of INTOXICATION. In 396 other cases Death was accelerated by the supervention of DELIRIUM TREMENS, ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.		ALL AGES.	Total under 1 Year.		1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
			Infants under 1 Month.	Others.

* When a person dies from an operation performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

OF the above 5041 ACCIDENTS, 67 are stated to have occurred to Women in a state of INTOXICATION. In 147 other cases Death was accelerated by the supervention of DELIRIUM TREMENS, ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS.* Here follow the details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.	ALL AGES.	Total under 1 Year. Infants under 1 Month.	Others.	1–	2–	3–	4–	Total under 5 Years.	5–	10–	15–	20–	25–	35–	45–	55–	65–	75–	85 and upwards.
Intoxication at time of Accident	67	–	–	–	–	–	–	–	–	–	1	–	6	24	17	13	6	–	–
Acceleration by Delirium Tremens	3	–	–	–	–	–	–	–	–	–	–	–	1	1	1	–	–	–	–
Acceleration by Erysipelas	24	–	2	–	–	–	–	2	1	–	1	–	2	5	2	6	3	2	–
Acceleration by Mortification	9	–	–	–	–	–	–	–	–	–	–	–	–	–	–	4	5	–	–
Acceleration by Pyæmia	91	3	5	–	3	1	1	13	4	6	3	3	6	11	13	17	10	5	–
Acceleration by Tetanus*	20	1	–	–	–	1	–	2	3	1	1	–	3	2	2	1	–	–	–

* Cases of Tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of *Causes of Death* *see* page 115).

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881. Since that date three new Registration Districts have been formed, the District of Kensington (1) having been divided into Paddington (1*a*) and Kensington (1*b*), the District of Bradford (497) into Bradford (497*a*) and North Bierley (497*b*), and the District of Anglesey (630) into Anglesey (630) and Holyhead (631).

For names of Towns, such as Bournemouth, Maidenhead, &c., which are not found in this "Index of Registration Districts," see the "Index of Registration Sub-districts" (pp. 208-217) *and "Index of certain Towns"* (pp. 220, 221).

York, 516.

INDEX OF REGISTRATION SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573 2) is the 2d Sub-District of the Wigton District, No. 573.]

Sub-District.	District.	No.
A		
Abbey Holme	Wigton	573; 2
Abbots Bromley	Uttoxeter	306; 2
Abbotsbury	Weymouth	264; 4
Abbots Langley	Watford	137; 4

GENERAL INDEX

TO

REGISTRAR-GENERAL'S FIFTY-SIXTH ANNUAL REPORT (1893).

PAGES

ACCIDENT; Mortality from (Abstracts, pp. 193–199) xvii

AGES; Mean, at Marriage and Re-marriage, continued increase of . . vii
at Death. (Tables 11–14, pp. xxxvi–xxxix.) ix
changes in Mortality Rates from those of recent years in certain groups of Ages ix
of 427,322 of the Persons married in 1893, distinguishing previous Civil Condition 68–70
at Death, of each sex, in Divisions and Counties, 1893 . . . 96–105
(*See also* DEATH RATES.)

AREA of United Kingdom and its parts. (Table 1.) . . . xxvi–xxvii
of Town and Country Districts in England and Wales. (Table 25.) . liv
of Islands in the British Seas. (Table 27.) lvi
of each District and Sub-district in England and Wales . . . 4–63
of each Division and County in England and Wales . . . 64, 66

ARMY, THE; Strength and Mortality of. (Table 29, p. lvii.) . . . xix

AUSTRALIAN COLONIES AND NEW ZEALAND; English Emigrants to. (Table 28.) lvi

AUSTRIA; Population, Marriages, Births, and Deaths. (Tables 39, 47.) . lxvi, lxxi

BANKERS' CLEARING HOUSE, 1868–93. (Table A.) vi

BELGIUM; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 53.). . . . . lxvi, lxxv

BIRTHS in England and Wales, 1893. (Abstracts, pp. 2–63.) . . . viii
Sex proportions and Counties with the highest and lowest proportions of Male Births. (Tables 2, p. xxviii, 3, p. xxix, 10, p. xxxv.) viii
Illegitimate. (Abstracts, pp. 2–63.) ix
Premature; increasing mortality ascribed to xvii
Aggregate Number of Names on Registers. (Table 26.) . . lv
in Islands in the British Seas. (Table 27.) lvi
of British Subjects at Sea. (Table 32, p. lviii.) xix
(*See also* MARINE REGISTER BOOK.)
in United Kingdom and its parts, and in other European States. (Tables 40–56.) . . . . . lxvii–lxxvii

BIRTH-RATES; Total, Legitimate, and Illegitimate. (Tables 2, p. xxviii, 3, 4, p. xxix, 10, p. xxxv.) . . . . . viii–ix
highest in industrial, and lowest in agricultural counties . . viii
in United Kingdom and its parts, and in other European States. (Tables 39–56.) . . . . . lxvi–lxxvii

	PAGES
CANCER; highest recorded Mortality in 1893	xvi
annual deaths and death-rates, 1869–93. (Tables 15, 16.)	xl–xliii
CAUSES OF DEATH; Mortality from the several Classes of, 1883–93. (Table B.)	x–xviii
deaths from various in each year, 1869–93. (Table 15.)	xl–xli
annual death-rates from various, 1869–93. (Table 16.)	xlii–xliii
CERTIFICATES of Marriages, Births, and Deaths issued in 1893	xviii
CERTIFICATION of Causes of Death	xviii
uselessness of 26,275 medical certificates in 1893, for scientific classification	xvii
14,336 uncertified causes of death in 1893	xviii
CHANGES in Constitution of Registration Districts in 1893. (Table 57.)	lxxviii–lxxix
CHICKEN-POX; Deaths from in 1893	xi
CHILDBIRTH and Puerperal Fever, increasing Mortality from. (Table 23, p. liii.)	xvi
CIRCULATORY ORGANS; decreased Mortality from diseases of	xvii
COAL; prices of, 1844–93. (Table 33.)	lix
CONGENITAL DEFECTS; increasing Mortality from	xvi
death-rates from, in quinquenniads 1861–80, and in each year 1881–93. (Table F.)	xvii
CONSOLS; prices of, 1844–93. (Table 33.)	lix
CONSTITUTIONAL DISEASES; Mortality ascribed to, 1883–93. (Table B., p. x.)	xvii
COUNTRY DISTRICTS; Mortality in. (Tables 24, 25, p. liv.)	x
CROUP; Mortality from in 1893	xiii
(*See* CAUSES OF DEATH.)	

DEATHS; in England and Wales, 1893 (Abstracts, pp. 2–63)	ix
from various Causes in England and Wales. (Table 15, pp. xl–xli.)	x–xviii
Certification of Causes of	xviii
of British Subjects at Sea. (Tables 31, 32, p. lviii.)	xix
(*See also* MARINE REGISTER BOOK.)	
Proportional Number from various Causes to 1,000,000 Deaths from all Causes, 1893. (Table 22.)	li
Aggregate Number of Names on Registers, 1844–93. (Table 26.)	lv
in Islands in the British Seas. (Table 27.)	lvi
in United Kingdom and its Parts, and in other European States. (Tables 40–56.)	lxvii–lxxvii
in Public Institutions	71–94
in Divisions and Counties, classified according to sex and age	96–105
in England and Wales, classified according to sex, age, and cause	108–121
in London, classified according to sex, age, and cause	122–135
in Registration Counties, classified according to sex and cause	136–159
from several causes in Divisions, Counties, and Districts	160–192
in England and Wales from Accident, Suicide, Murder, and Manslaughter, distinguishing method, sex, and age	193–205
DEATH RATES; in 1893. (Table 2, p. xxviii.)	ix
of Males and Females compared. (Table 2, p. xxviii.)	ix
in groups of ages. (Tables 11–14, pp. xxxvi–xxxix.)	ix
among infants	ix
in Urban and Rural Districts. (Tables 24, 25, p. liv.)	ix

PAGES

DEATH-RATES—*continued.*
from Classes of Causes (1883–93, Table B., p. x.) . . . x–xviii
in Army and Navy in series of years. (Tables 29, 30, p. lvii.) . xix
in Merchant Service. (Table 31, p. lviii.) xix
in European States. (Tables 39–56, pp. lxvi–lxxvii.) . . xix

from various Causes in England and Wales, 1869–93, and in groups of years, 1858–90. (Tables 16, 17.) . . . . . xlii–xlv
from the Principal Zymotic Diseases in England and Wales, 1838–93. (Table 18.) xlvi
from the Principal Zymotic Diseases in London, 1842–93. (Table 19.) xlvii
from several Causes, in Counties, 1893. (Table 20.) . . . xlviii–xlix
of Persons, Males, and Females, 1893, classified according to Cause. (Table 21.) l
from the Principal Zymotic and some other Diseases in Counties, 1883–92 and in 1893. (Table 23.) . . . . . lii–liii.
(*See also* INFANT MORTALITY.)

DENMARK; Population, Numbers, and Proportions of Marriages, Births, and Deaths. (Tables 39, 44.) . . . . . lxvi, lxix

DENSITY OF POPULATION; Persons to a square Mile, 1851–93. (Table 24.) liv

DEVELOPMENTAL DISEASES; Mortality ascribed to. (Table B., p. x.) . xvii

DIABETES; Mortality in 1893, the highest on record xvi

DIARRHŒAL COMPLAINTS; Mortality from, exceptionally low . . . xv
(*See* CAUSES OF DEATH.)

DIETETIC DISEASES; Mortality ascribed to (1883–93, Table B., p. x.) . xvi

DIPHTHERIA; increased Mortality ascribed to in 1893 xiii
changes in local incidence of xiii
counties showing the highest and the lowest rates in 1893 . . xiv
annual deaths and death-rates, 1869–93. (Tables 15, 16) . . xl, xlii
(*See* CAUSES OF DEATH.)

DISTRICTS, REGISTRATION; Alphabetical Index of 206–209

DIVORCED PERSONS; Re-marriages of vii

DYSENTERY. (*See* DIARRHŒAL COMPLAINTS.)

EDUCATION; as shown by Signatures in Marriage Registers . . . viii

EMIGRATION from United Kingdom, 1874–93. (Table 28.) . . . lvi

ENTERIC FEVER; excessive mortality from in 1893 xii
Mortality from, in 18 Registration Districts in 1890–91–92–93. (Table C.) xii
Counties showing maximum rates in 1893 xii
local areas specially subject to, 1890–91–92–93. (Table D.) . xiii
(*See* CAUSES OF DEATH.)

EUROPEAN STATES; Populations, Numbers, and Proportions of Marriages, Births, and Deaths. (Tables 39–56.) . . . . . lxvi–lxxvii

EXECUTIONS in 1893 . . . . . xvii; 120, 121

EXPORTS of British Produce, value per head compared with marriage-rate (Table A.) vi

PAGES

FEES received at General Register Office. (Table 26, p. lv.) xviii

FEVER; Mortality from, in Counties, 1883–92 and in 1893. (Table 23.) . lii
(*See also* ENTERIC FEVER and CAUSES OF DEATH.)

FRANCE; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 54.) . . . . . lxvi, lxxvi

GERMAN EMPIRE; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 50.) . . . . . lxvi, lxxiii

GLAISHER, JAMES, Esq., F.R.S.; Meteorology of 1893. (Tables 34–38, pp. lx–lxv.) . . . . . xxii–xxiv

GUERNSEY and ADJACENT ISLANDS; Area, Population, Baptisms, and Deaths. (Table 27.) lvi

HOMICIDE; Deaths ascribed to in 1893 xvii

HOLLAND. (*See* NETHERLANDS.)

HOSPITALS, Deaths in 71–94

HUNGARY; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 48.) . . . . . lxvi, lxxii

HYDROPHOBIA; decreased Mortality from xvi
(*See* CAUSES OF DEATH.)

ILL DEFINED and NOT SPECIFIED CAUSES; Deaths ascribed to and result of applications for fuller Information than that afforded by the Medical Certificates xvii

ILLEGITIMATE BIRTHS. (*See* BIRTHS.)

IMPORTS; Value of, per head of Population, 1860–93. (Table A.) . . . vi

INDEXES; Additions to in 1893, and aggregate number of Names in . . xviii
Searches in. (Table 26, p. lv.) xviii
to Districts, Sub-Districts, and certain Towns 206-221

INFANTILE MORTALITY; continued excess of, in 1893 ix
in Counties (Table 10) xxxv
in England, 1838–93. (Table 18.) xliv
in London, 1842–93. (Table 19.) xlvii

INFLUENZA; decline of, in 1893 xiv
accompanied by increased fatality of some other diseases especially those of the respiratory organs xv
Mortality attributed to, and to diseases of respiratory organs, in London and two other areas, in 1890–91–92–93, compared with that of 1889 as a standard, and showing excess of Epidemic years. (Table E.) xv
Metropolitan area suffered greatest mortality from, in 1893 . . xv
Deaths from Epidemic 1890–91–92–93, estimated at 125,000 . xv
(*See* CAUSES OF DEATH.)

INQUESTS; in 1893 xviii
in Divisions, Counties, and Districts 160–192

INSTITUTIONS, PUBLIC; Deaths in 71–94

PAGES

INTEMPERANCE; Mortality directly ascribed to, in 1893, the highest on record xvi

Annual death-rates, 1869–93. (Table 16.) xlii

INTERNATIONAL VITAL STATISTICS. (Tables 39–56, pp. lxvi–lxxvii.) . xix

difficulty of comparing, owing to variations of sex and age distribution, and desirability of adopting a "Standard Population" for international use xx

INTOXICATION; Accidental Deaths while in a state of 196, 199

IRELAND; Area, Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 1, 39, 43.) . . . . xxvii, lxvi, lxviii

IRISH EMIGRANTS from United Kingdom, 1874–93. (Table 28.) . . . lvi

ISLANDS in BRITISH SEAS; Area, Population, Births, and Deaths. (Table 27.) lvi

ITALY; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 56.) . . . . . lxvi, lxxvii

JERSEY; Area, Population, Births, and Deaths. (Table 27.) . . . lvi

JEWS; increase of marriages among vii

JEWISH MARRIAGES; increase of vii

LEGITIMATE BIRTHS. (*See* BIRTHS.)

LOCAL DISEASES; Further decline of Mortality from. (Table B., p. x.) . xvii

LONDON; Mortality from principal Zymotic Diseases, and Infant Mortality, 1842–93. (Table 19.) xlvii

Deaths in, classified according to Sex, Age, and Cause . . 122–135

Deaths in, from several Causes, and Inquests, in 1893 . . 160

LUNATIC ASYLUMS, PUBLIC; Deaths in 71–94

MAN, ISLE OF; Area, Population, Births, and Deaths. (Table 27.) . . lvi

MANSLAUGHTER; Deaths ascribed to, in 1893 . . . . . xvii; 204, 205

MARINE REGISTER BOOK; entries of Births and Deaths in, 1893 . . xix

MARRIAGES; number registered in England and Wales, 1893. (Abstracts, pp. 2–67.) v

forms of celebration of. (Tables 5, 6, pp. xxx, xxxi; Abstracts, pp. 64–67.) vii

further decline of Roman Catholic vii

continued increase of Jewish vii

First Marriages and Re-Marriages. (Table 7, p. xxxii; Abstracts, pp. 64–67.) vii

of Divorced Persons vii

Ages at Marriage, proportions stated and not stated . . . vii

increasing tendency to defer marriage vii

of Minors declining. (Tables 7, 8, pp. xxxii, xxxiii; Abstracts, pp. 64–67.) vii

of Minors; comparative prevalence of, in certain counties. (Table 8, p. xxxiii.) vii

(*See also* AGES and SIGNATURE by MARK.)

Buildings registered for Solemnization of. (Table 9, p. xxxiv) . . viii

in United Kingdom and its parts, and in other European States. (Tables 40–56.) . . . . . lxvii–lxxii

PAGES

MARRIAGES—*continued.*
Aggregate number of Names of Persons married, on Registers, 1843–93. (Table 26.) lv
Conditions and ages of 427,322 of the Persons married . . 68–70

MARRIAGE-RATES; further decline of, in 1893. (Tables 2, 3, 4, 8, pp. xxviii, xxix, xxxiii.) v
Fluctuations of, compared with commercial fluctuations. (Table A.) v–vi
in the United Kingdom and its parts, and in other European States. (Tables 39–56.) . . . . . lxvi–lxxvii

MEASLES; mortality from, in 1893 xi
marked decline of, in London xi
Comparison of County distribution of xi
Annual deaths and death-rates, 1869–93. (Tables 15, 16.) . . xl, xlii
Mortality from, in Counties, 1883–92 and 1893. (Table 23.) . lii

MEAT; Average Prices of, 1850–93. (Table 39.) lix

MERCANTILE MARINE; Strength and Mortality, and Births and Deaths of British Subjects at Sea. (Tables 31, 32, p. lviii.) . . . xix

MORTALITY. (*See* CAUSES OF DEATH, AND DEATH-RATES.)

MURDER; Deaths ascribed to . . . . . xvii; 202, 203

NAVY, THE; Mortality in. (Table 30, p. lvii.) xix

NEGLIGENCE; Deaths from. (*See* ACCIDENT.)

NERVOUS SYSTEM; mortality from diseases of, very low in 1893 . . xvii

NETHERLANDS, THE; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 52.) . . . . . lxvi, lxxiv

NEW ZEALAND. (*See* AUSTRALIAN COLONIES.)

NORTH AMERICAN COLONIES; English Emigrants to. (Table 28.) . . lvi

NORWAY; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 45.) . . . . . lxvi, lxix

OFFENCES against the Registration Acts, and Convictions in 1893 . . xviii

OLD AGE; Mortality from, in 1893 xvi

PARASITIC DISEASES; Mortality from, in 1893, unprecedentedly low . xvi
Annual Mortality in each year, 1883–93. (Table B.) . . x
Annual Mortality in each year, 1869–93. (Table 16.) . . xlii

PAUPERISM; Proportion to Population, 1849–93. (Table 33.) . . . lix

PHTHISIS; Mortality from, in 1893, the lowest on record xvii
Annual deaths and death-rates in each year, 1869–93. (Tables 15, 16.) . . . . . xl, xlii

POPULATION in 1893, and method of Estimating v
estimated, of United Kingdom, and its Parts, distinguishing Sex, 1844–93. (Table 1.) . . . . . xxvi–xxvii
of Registration Counties, 1893. (Table 20.) . . . . xlviii–xlix

PAGES

POPULATION—*continued.*
of Town and Country Districts, 1893. (Table 25.) . . . liv
1861-71-81-91, in Islands in British Seas. (Table 27.) . . lvi
of United Kingdom, and its parts, and of other European States. (Tables 40-56.) . . . . . lxvii–lxxvii
enumerated in 1891, in Districts and Sub-districts . . . 4–63
enumerated in 1891, in Registration Divisions and Counties . . 64, 66

PREMATURE BIRTH; increasing Mortality ascribed to xvii
death-rates from, in quinquenniads 1861–80, and in each year 1881–93. (Table F.) xvii

PRICES; of Consols, Wheat, and Coal, 1844–93; and of Meat, 1850–93. (Table 33.) lix

PRUSSIA; Population, Numbers and Proportions of Marriages, Births and Deaths. (Tables 39, 51.) . . . . . lxvi, lxxiii

PUBLIC INSTITUTIONS. (*See* INSTITUTIONS.)

PUERPERAL FEVER and Accidents of Childbirth; high Mortality from, in 1893 xvi

REGISTERS; Aggregate number of Names upon. (Table 26, p. lv.) . . xviii
and RECORDS in General Register Office xviii

REGISTRATION; Progress of. (Table 26, p. lv.) xviii

REGISTRATION ACTS; Offences against, and Convictions in 1893 . . xviii

RE-MARRIAGES. (*See* MARRIAGES.)

RESPIRATORY DISEASES; excessive Mortality from, probably due to Influenza xv
Mortality attributed to, and to Influenza, 1890–91–92–93, compared with that of 1889 as a standard, and showing excess of Epidemic years. (Table E.) xv
Mortality in 1893 compared with decennium 1883–92 . . . xvii

RURAL MORTALITY. (Tables 24, 25, p. liv.) ix

SCARLET FEVER; increased Mortality from, in 1893 xi
Death-rate low as compared with that of the decennium 1883–92 . xi
Counties showing excessive Mortality from xi
in London; increase in the proportion of mortality occurring in Hospitals xii
case-mortality from, in Metropolitan Asylums Hospitals . . xii
Annual deaths and death-rates, 1869–93. (Tables 15, 16.) . . xl, xlii

SCOTCH EMIGRANTS from United Kingdom, 1874–93. (Table 28.) . . lvi

SCOTLAND; Area and Population, distinguishing Sex, 1844–93. (Table 1.) xxvii
Population, Numbers and Proportions of Marriages, Births, and Deaths. (Tables 39, 42.) . . . . . lxvi, lxviii

SEA; Births and Deaths of Passengers (British Subjects) at. (Table 32, p. lviii.) xix
(*See also* MARINE REGISTER BOOK.)

SEAMEN. (*See* NAVY and MERCANTILE MARINE.)

SEARCHES in the Indexes and Certificates issued in 1893. (Table 26, p. lv.) xviii

SEX; Birth proportions vary in different localities viii
Death proportions ix

PAGES

SIGNATURE BY MARK in Marriage Registers. (Tables 7, 8, pp. xxxii–xxxiii; abstracts, pp. 64–67.) viii

SMALL-POX; increased mortality from, in 1893 xi

Proportions of persons dying from, returned as Vaccinated, Unvaccinated, and "not stated" as to Vaccination . . . xi

Annual deaths from, and death-rates, 1869–93. (Tables 15, 16.) . xl, xlii

SPAIN; Population, Numbers and Proportions of Marriages, Births, and Deaths. (Table 55.) lxxvii

SPECIFIC FEBRILE DISEASES. (*See* ZYMOTIC DISEASES.)
